

Theories of language

I. What is the difference between Approach, Method, Procedure and Technique?

Approach

- It is a broader term than method.
- It is a view of looking at things.
- It is a set of ideas.
- An approach can have many methods.
- An approach is a set of assumptions about the nature of language. **(Brown)**.
- It is generally a theory that attempts to explain how languages are learned.
- It is based on the general assumptions about what language is and about how learning a language takes place.

Method

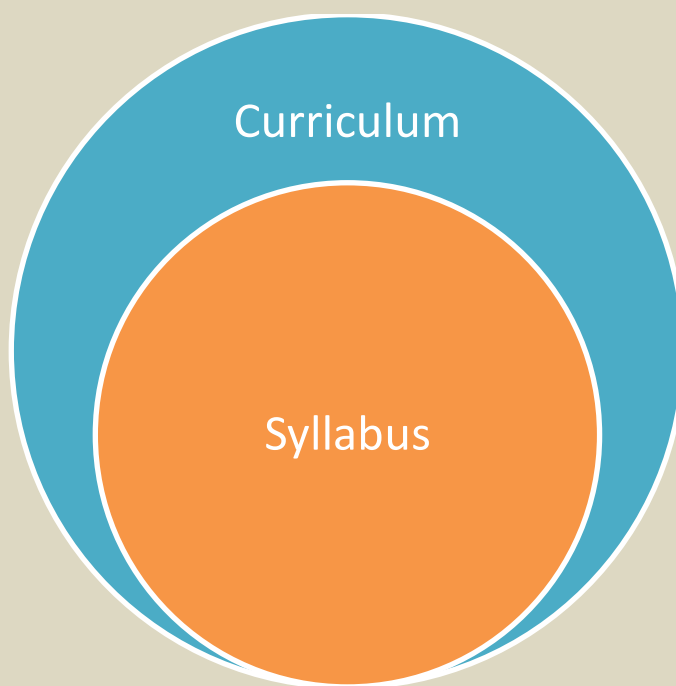

- It is a practical implementation of an approach.
- It is a **theory** which is put into practice.
- It is a set of techniques and procedures that are used systematically with the aim of reaching efficient learning.
- A method is a set of specifications of how the teacher should teach and how the learner should learn derived from a particular theory of language and a theory of language learning.
- A method is based on an approach.
- The content to be taught.
- Teaching method is what kind of activity we use in order to teach.
- For the teacher, methods prescribe what materials and activities should be used, how they should be used and what the role of the teacher should be.

<i>Procedure</i>
- According to Harmer, a procedure is ‘‘smaller than a method and larger than a technique’’. - A procedure is a sequence of techniques - It is a sequence which can be described in terms such as, first you do this, and then you do that.
<i>Technique</i>
- Spider map, mind map, brainstorming, jigsaw, etc. - If a method is a set of techniques/ procedures that are intended to make the process of learning fruitful, a technique is one single technique of a method. - It is a single activity rather than a sequence and is a technique rather than a whole procedure. - Any of a wide variety of exercises, activities, or devices used in the language classroom for realizing lesson objectives. PPP (presentation, practice, procedure) is one of the famously known and most widely used techniques in learning.

II. What is the difference between curriculum and syllabus

	<i>Curriculum</i>	<i>Syllabus</i>
Purpose	✓ It defines the content plan and methodology of the whole study program or course.	✓ It defines specific instructions, activities and scheduling for a particular subject.
	✓ It has to do with all the subjects (Arabic, English, Math, etc.)	✓ It deals with a specific subject (Math, Physics, etc.).
	✓ It reflects the policy/philosophy of the educational system/ the state.	✓ It reflects what the learners are expected to learn/ perform at the end of a specific course.
	✓ It represents what students are expected to learn and perform at the end of schooling.	✓ The syllabus of high school is different from the one in middle school. For instance, passive voice does not include in the middle school.
Scope	It is a wider concept	It is a narrower concept
Nature	<u>Prescriptive</u> Prescriptive approach is textbook knowledge and contains rigid rules of	<u>Descriptive</u> Descriptive approach is much more lenient and takes into account how people speak and

	grammar as it should be used.	write the language.
Created by	Government, state., etc.	Subject Teacher
Term	Long term	Until the specific subject term is finished.
Flexibility	Almost no place for alteration	Highly flexible
When you achieve the objectives of the syllabus, you are automatically reaching the goals of the curriculum.		

LEARNING THEORIES

- ❖ Psychologists are intrigued by how the mind acquires knowledge. **If we know how knowledge is acquired**, we will be able to use appropriately the teaching and learning methods in the classroom.

I. What is learning?

- The acquisition of knowledge or skills through study, experience, or being taught.
- Learning is the process of acquiring new understanding, knowledge, behaviors, skills, values, attitudes, and preferences

II. Behaviourism النظرية السلوكية

- **The pioneers: Watson, Pavlov, Skinner, Thorndaik.**
 - **Behaviourism** is a learning theory that considers language to be a learned behaviour or habit, which we acquire through a process of **stimuli-response** and **positive reinforcement or punishment**.
 - The pioneers considered learning as a matter of “habit formation”. For them, effective learning was a matter of reinforcing good habits, while errors were seen as bad habits.
 - **Behaviorism** assumes that all learning occurs through interactions with the **environment and that environment** shapes behavior.

Example:

- ✚ The teacher asks a question – **stimuli** – and then the student gives an answer – **response**.
- ✚ If the answer is **correct**, the teacher praises him – **positive feedback**.
- ✚ Based on this feedback, whenever someone else asks the student the same question, the student gives the same answer – **repetition**.
- ✚ This happens **again, again, and again** until it becomes a habit.
- ✚ If the answer is incorrect, the teacher warns or punishes the student – negative feedback. Having received such feedback, the student will not give the same answer the next time – **change of behaviour**. Instead, he will try to find the right answer to avoid punishment.

Watson famously claimed that if he were to be given a dozen healthy infants, he could shape them into anything: doctors, lawyers or thieves, regardless of their background or genetic predisposition.

The three types of Behavioral Learning

1. Classical conditioning:

- **Classical conditioning (also known as Pavlovian or respondent conditioning)** is learning through association and was discovered by **Pavlov**, a Russian physiologist.
- In the 1890's, a **Russian psychologist named Ivan Pavlov** did famous experiments on dogs. He showed dogs some food and rang a bell at the same time. After a while, the dogs would associate the bell with the food. Eventually, just ringing the bell made the dogs salivate.

What is classical conditioning?

- The association of a particular stimulus or behavior with an unrelated stimulus or behavior.
- It is learning through **association**.
- **Classical conditioning** is a type of **unconscious or automatic learning**.
- A learning process that occurs when two **unrelated stimuli are repeatedly paired**.

For example:

-  A person who associates leaving the home with being abused by their parents might develop [agoraphobia](#).

Pavlov's Dogs Study :

- **Pavlov** predicted the dogs would salivate in response to the food placed in front of them, but he noticed that his dogs would begin to salivate whenever they heard the footsteps of his assistant who was bringing them the food.
- When **Pavlov** discovered that any object or event which the dogs learned to associate with food (such as the lab assistant) would trigger the same response, he realized that he had made an important scientific discovery. Accordingly, he devoted the rest of his career to studying this type of learning.

Classical conditioning definitions:

A. Unconditioned Stimulus

- ♠ An unconditioned stimulus is a stimulus or trigger that leads to an automatic response.
- ♠ Pavlov called the **food** an unconditioned **Stimulus** because its effects on the dog were not learned; instead they triggered unconditioned response which happened naturally and completely out of the dog's control.

B. Unconditioned Response

- ♠ An unconditioned response is an automatic response or a response that occurs without **thought when an unconditioned stimulus is present**. If you smell your favorite food and your mouth starts **watering**, the watering is an **unconditioned response**.

C. Neutral Stimulus

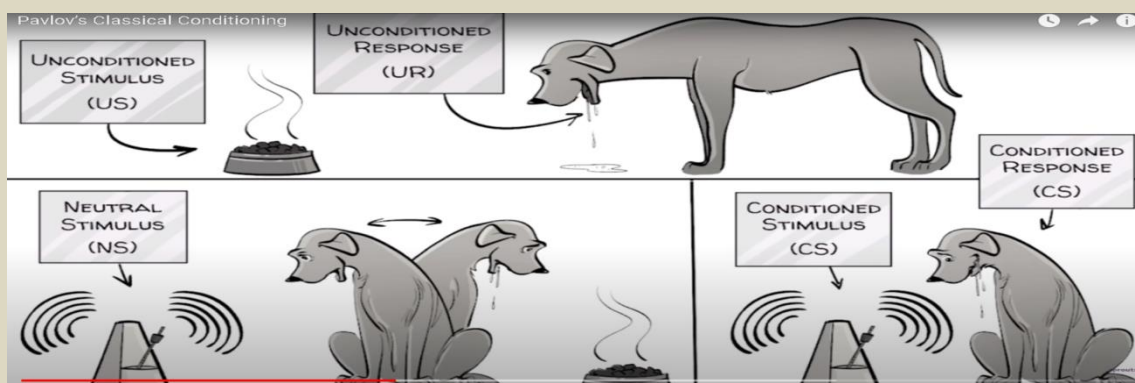

- ♠ A **neutral stimulus** is a stimulus that doesn't initially trigger a response on its own.
- ♠ The metronome used in the experiment is the neutral stimulus through the process of repetitive pairing with the food. As a result, the dog learns to connect the two, which means the neutral stimulus becomes the conditioned stimulus and response

D. Conditioned stimulus

- ♠ A conditioned stimulus is a stimulus that was once neutral (didn't trigger a response) but now leads to a response. If you previously didn't pay attention to dogs, but then got bit by one, and now you feel fear every time you see a dog, the dog has become a conditioned stimulus.

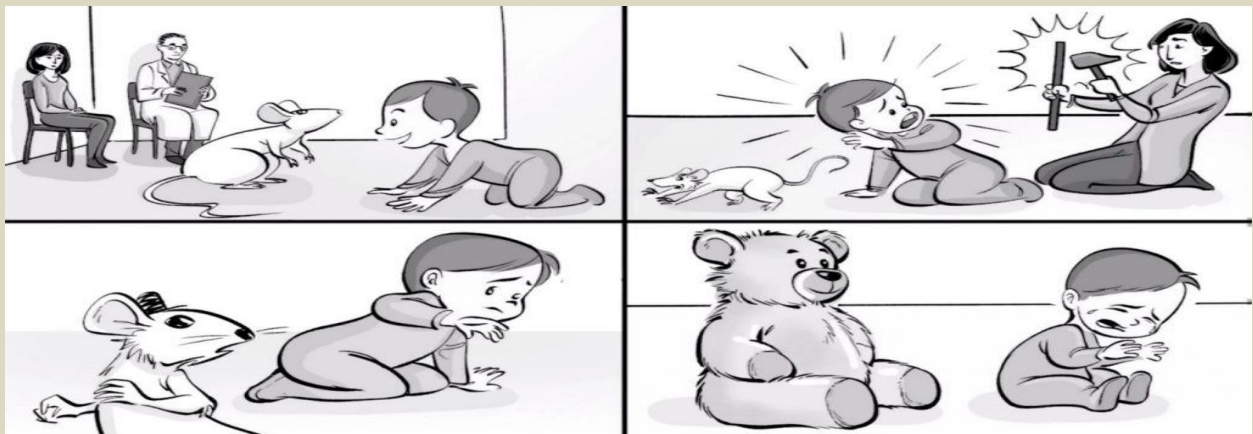

E. Conditioned response

- ♠ A conditioned response is a learned response or a response that is created where no response existed before. Going back to the example of being bit by a dog, the fear you experience after the bite is a conditioned response.

The “Little Albert” Experiment by Watson:

- **John Watson** proposed that the process of classical conditioning (based on Pavlov’s observations) was able to explain **all aspects of human psychology**.
- He uses classical conditioning to program a baby to be afraid of a lab rat.
- **Watson and Raynor** presented **Little Albert** with a white rat and he showed no fear.
- **Watson** then presented the rat **with a loud bang** that startled **Little Albert** and made him cry.
- When Little Albert was just over 11 months old, the white rat was presented, and seconds later the hammer was struck against the steel bar.
- After seven pairings of the rat and noise (in two sessions, one week apart), **Albert** reacted with crying and avoidance when the rat was presented without the loud noise
- After the continuous association of the white rat and loud noise, **Little Albert** was classically conditioned to experience fear at the sight of the rat.
- Five days later, **Watson and Rayner** found that Albert developed phobias of objects which shared characteristics with the rat; including the family dog, a fur coat, some cotton wool and a Father Christmas mask! This process is known as generalization.

Another examples of classical conditioning:

- ✚ For the last few years, you receive your paycheck every Friday. Even though you have a new job where you receive your paycheck on different days, you still feel good on Fridays. You’ve been conditioned to associate it with the positivity of receiving that paycheck.
- ✚ You used to smoke in a certain outside area at work but have recently quit smoking. Every time you go to this outside break area, your body craves a cigarette.
- ✚ During a thunderstorm, a tree breaks and falls onto your house, causing major damage. Now whenever you hear thunder, you feel anxiety.

2. Operant conditioning

- We can learn by the consequences of our behavior (**i.e., if something good happens, you do it again; if something bad happens, you don't do it again**)
- It was first studied by **Thorndike** and later made famous by the work of **Skinner**.
- It is a type of learning in which an animal or a human learns a behavior by associating it with its **consequences**. **In other words, it is a method that occurs through rewards and punishments.**
- It explains how **consequences** lead to changes in voluntary behavior.

There are two main components in **OC: reinforcement and punishment**

<u>Reinforcement</u>	<u>Punishment</u>
▪ You do something; it helps your situation, so you are more likely to do that again. ▪ Behaviors which are reinforced tend to be repeated ▪ Behaviors which are not reinforced tend to be forgotten	▪ You do something, it has a bad consequence, so you are less likely to do that thing again ▪ It is a consequence that decreases the probability of a behavior being repeated.

For instance:

- ✚ If a dog poops on a carpet, we can either provide reinforcement so the dog does it again, or punishment to make it stop.
 - Both reinforcement and punishment can either be **positive or negative**, which means we have four ways to teach this dog a lesson.
 - When something is added or presented, the process of learning is called positive;
 - When something is removed or added, the process of learning is called negative

	Reinforcement	Punishment
Positive (added or presented)	Positive reinforcement Addition of Pleasant stimulus	Positive punishment Addition of unpleasant stimulus
Negative (removed or added)	Negative reinforcement Removal of unpleasant stimulus	Negative punishment Removal of pleasant stimulus

3. Observational learning by Bandura

- **Albert Bandura** wanted to study whether we can learn simply from observing someone else do something, which he defined as **observational learning**.
- **Social learning theory**, proposed by **Albert Bandura**, emphasizes the importance of observing, modeling, and imitating the behaviors, attitudes, and emotional reactions of others.
- **Social learning theory** considers how both environmental and cognitive factors interact to influence human learning and behavior.

Bobo doll experiment :

- **The experiment** was executed via a team of researchers who physically and verbally abused an inflatable doll in front of preschool-age children, which led the children to later mimic the behaviour of the adults by attacking the doll in the same fashion

A group of nursery school children watched an adult mistreating a bobo doll.

The adult mistreated the doll by punching it, kicking it and hitting it with a mallet.

Albert Bandura, then exposed this group (the experimental group) and another group who had not watched the violence (the control group) to a 'frustrating experience'. They were shown a room full of exciting toys and given the impression they could play with them.

They were then told they could not and taken individually to a room of unattractive toys which included a bobo doll and a mallet.

As Bandura had predicted, those who had earlier watched the mistreatment of the bobo doll were more likely to imitate this behaviour and show aggression towards the doll.

Ethical Issues

- harm and the well-being of participants. The children may have been distressed by the aggressive behaviour they witnessed
- the aggressive behaviour the children learned from the study may have stayed with them, going on to become a behavioural problem.

Justifications

- However some argue these experiments are important because they resulted in many more studies concerning the effects of observational learning.

However this study faced huge criticisms for being extremely unethical and permanently altering the child participants' behaviour

Create your own at Storyboard That

Results:

- Behaviors can be learned through observation.
- Kids are more likely to model violence when they see adults being violent.

4. The law of Effect by Thorndike

→ The law of effect principle developed by **Edward Thorndike** suggested that responses that produce a satisfying effect in a particular situation become more likely to occur again in that situation.

And

→ Responses that produce a discomforting effect become less likely to occur again in that situation.

Two key aspects of the law of effect:

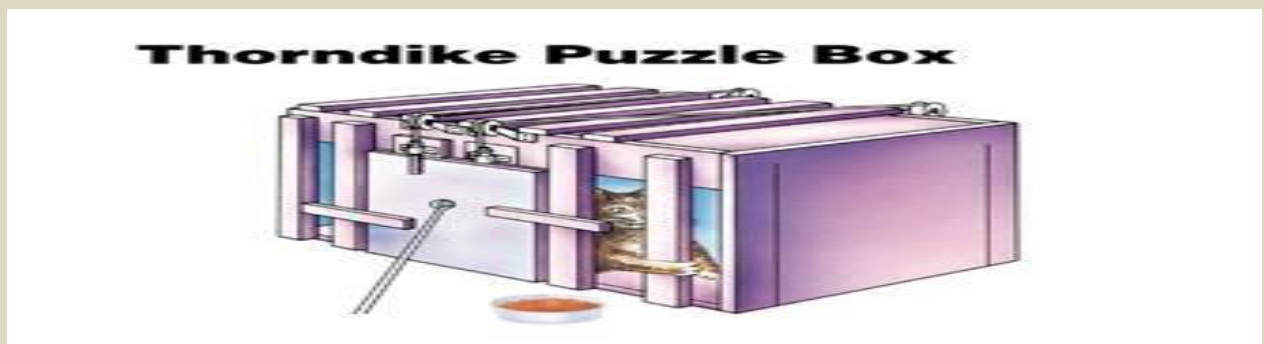

- **Behaviors immediately followed by favorable consequences are more likely to occur again.**

For instance:

- ✚ Being praised by a supervisor for showing up early for work made it more likely that the behavior would be repeated.
- **Behavior followed by unfavorable consequences is less likely to occur again.**

Experiment of Thorndike on Cat:

- He would place a cat inside the puzzle box and then place a piece of meat outside the box. He would then observe the animals' efforts to escape and obtain the food. He recorded how long each animal took to figure out how to free itself from the box.
- Eventually, the cats would press the lever, and the door would open so that the animal could receive the reward.
- Even though first pressing the level occurred simply by accident, the cats became likely to repeat it because they had received an award immediately after performing the action.
- **Thorndike** noted that with each trial, the cats became much faster at opening the door.

III. Cognitivism by Canny النظرية المعرفية

1. Definition:

- **Cognitivists** argue that language is not just a learned habit devoided of creativity.
- They also suggest that humans are endowed with LAD, **language acquisition device**, which helps them not only learn languages, but also use them creatively.
- The defenders of this theory posit that a learner is **prone to use language creatively and not just imitate what's being said around him/her**. This is because they are constantly using their **cognitive abilities** to think and creatively **manipulate language**.
- **Cognitivism** was coined by **Canny**.
- It came as a reaction to the **behaviorist thought** which ignores human's innate capacity to acquire language which also neglects **the mental process of learning**.

This theory contrasts with behaviorism

- The cognitive approach to learning assumes that the learner uses **cognitive processes** as an active participation in the learning process.

2. Main Principles of Cognitivism

- ❖ It focuses on **the mind**, and more specifically on **mental processes** such as, **thinking, knowing, memory and problem solving**.
- ❖ It focuses on the **thought process** behind behavior. Changes in behavior are observed, and used as indicators as to what is **happening inside the learning mind**.
- ❖ It considers **the individual as an active being and builder of his own knowledge**.
- ❖ **Learning is an internal rather than external change**.
- ❖ Learning can occur without **reinforcement, change in behavior**.
- ❖ **Knowledge** is organized and stored in **schema**.
- ❖ Learning is a process of relating new information to previously learned information.

3. Pioneers:

A. Chomsky: Innateness

The Nativist theory (Mentalism)	The Empiricist theory (Behaviorism)
It stresses that humans are born with the innate ability to develop language, which means that human behavior is biologically determined.	The empirical researchers focus primarily on social context to understand how language is acquired, so the human behavior is culturally determined.
Chomsky: → He believes that human beings are born knowing something about the structure of human language.	Skinner: (Verbal behavior) → He believes that language is learned through stimulus-respond chain. That is to say, there is a reward punishment while using language.
→ This set of languages learning tools, provided at birth, is referred to by Chomsky as the LANGAGUE ACQUISITION DEVICE (gene). (acquisition rather than learning) → The central point of the Chomsky's objection was that if all languages are learnt by behavior, how children's performance includes things they have not produced before.	→ He suggested that language is not necessarily a human-specific capacity. → So, behaviorism is based on three basic ideas: conditioning (rat), habit formation (bill and food) (dog) and the importance of the environment. To get something, there should be another thing Classical conditioning: Pavlov (dog) Operant conditioning: Thorndike They are both concepts of behavioral psychology.

Language-Specific capacities	vs	General Cognitive Capacities
There is a debate about the innate structure in the initial state. Does the initial state contain language-specific capacities , or does it contain only general cognitive capacities . (closer to Chomsky and Jean Piaget)		
Chomsky: He believes that there is a language specific capacity.		Jean Piaget: The language acquisition results from the interaction of various general cognitive capacities , such as memory, intelligence, motivation, etc.
The state of the human mind as it enters the world is very poorly understood. This questions of what kind of innate structure(language specific versus general)		

Chomsky's position:

- This is one of the most clearly **articulated positions** on the subject.
- He believes that human brain is **pre-wired** with some **basic rules of language**.
- He has arrived at this position through what we might call "**A what else**" argument.

These are some observations that have led Chomsky to this conclusion:

1. The complexity of Acquired Structures.

- » The complexity of grammar makes difficult to explain how human beings acquire such a complex system, including sentences' structure, categories of words, various types of morphemes, etc. unless we assume that there are **prefixed grammatical rules** which a child born with.

2. Fixed Onset and Development

- » **The acquisition of language** begins at about the same time for all normal children, regardless of each child's particular environment or the specific language to which he or she is exposed to, unless we assume that children **are genetically predisposed** to acquire a grammar that meets certain criteria.

3. Rapidity of Acquisition.

- » The fact that a normal child acquires the majority of his or her grammar by about 5 years of age which make us consider that there is a gene **pre-wired** in the children's brain, but it starts to despair around the age of puberty and totally at the onset of adulthood.

4. Features Common to all languages

5. Independence of instruction

- » The knowledge of the rules of language is **acquired** without training.
- » **Child** learns language by his owns. **Against Empiricism**

B. Jean Piaget: Stages of Cognitive development

- He believes that children as they grow, their minds grow as well.
- He thought that happens generally in different stages.
- **Jean Piaget's theory of cognitive development** suggests that children move through four different stages of learning.
- As kids interact with the world around them, they continually add new knowledge, **build upon existing knowledge**, and adapt previously held ideas to accommodate new information.

Piaget's stages are:

- **Sensorimotor stage:** Birth to 2 years
- **Preoperational stage:** Ages 2 to 7
- **Concrete operational stage:** Ages 7 to 11
- **Formal operational stage:** Ages 12 and up

1. **Sensorimotor stage: (0-2)**

- ❖ Sensory comes from senses
- ❖ **Children gather information** about their world with **their eyes, through their sight, smell, taste, hearing and touch.**
- ❖ When we see babies, they are always touching stuff and putting it in their mouth.
- ❖ They are active; as they discover how to use their senses, they discover how to move their bodies around.
- ❖ The main task or awareness that develops during this time is **object permanence**: infants **don't recognize that objects still exist even though they cannot see them.**

For example:

- ✚ If you take a ball away from a boy or a girl, they won't look for it because they don't understand that it still exists.

2. *Pre-operational stage: (2-7)*

- ❖ **MENTAL OPERATION: it is imagining things.**
- ❖ It is when children start to develop and engage in pretend play, and they will be able to use symbols to represent things.
- ❖ As they learn that words symbolize objects, they assist them in discovering the world around them.
- ❖ **Children of this age are very egocentric**
- ❖ We learn to speak and understand that word images and gestures are symbols for something else.

3. *Concrete operational stage: (7-11)*

- ❖ In this phase, they develop **conservation**.

- ❖ In this stage, children come to realize that the amount of water in two glasses is the same.
- ❖ In this stage, children start reasoning about mathematics; they will be able to understand that $8+4=12$ and $12-4=8$

4. *Formal operational stage: (12-and up)*

- ❖ That is when children are able to reason about abstract concepts and think about consequences of potential actions
- ❖ At this point, children are reasoning more like adults and they continue to develop that over time.
- ❖ Once we become teenagers, we become **formally operational**
- ❖ We now have the ability to think more rationally about abstract concepts and hypothetical events
- ❖ Our advanced cognitive ability allows us to understand abstract concepts such as success, love, and hate.

C. Howard Gardner: the theory of multiple intelligences

- **As Gardner (1983)** points out in his famous theory of multiple intelligences, people have **various kinds of intelligence**. That is, when an individual possesses a particular intelligence, he or she owns a variety of abilities, which may aid them in becoming stronger in many aspects of life. However, is that we don't have the same strength in each intelligence area.

1. Visual-Spatial Intelligence (“art smart” or “picture smart”)

- ❖ People who are strong in **visual-spatial intelligence** are good at visualizing things.
- ❖ This intelligence represents the knowing that occurs through the **shapes, images, patterns, designs, and textures** we see with our external eyes, but also includes all of the images we are able to conjure inside our heads.
- ❖ When a person owns this ability, it makes him stronger in **directions, maps** as well as allows him to recognize **patterns and analyze pictures easily**.

Characteristics:

People with visual-spatial intelligence:

- Read and write for enjoyment
- Are good at putting puzzles together
- Interpret pictures, graphs, and charts well
- Enjoy drawing, painting, and the visual arts

If you're strong in visual-spatial intelligence, good career choices for you are:

- Architect
- Artist
- Engineer

2. Linguistic-Verbal Intelligence

- ❖ This intelligence involves the knowing which comes through language; through **reading, writing, and speaking**. These individuals are typically very good at **writing stories, memorizing information, and reading**.

Characteristics

People with linguistic-verbal intelligence:

- Remember written and spoken information
- Enjoy reading and writing
- Debate or give persuasive speeches
- Are able to explain things well
- Use humor when telling stories

Potential Career Choices

If you're strong in linguistic-verbal intelligence, good career choices for you are:

- Writer/journalist
- Lawyer
- Teacher

3. Logical- Mathematical Intelligence

- ❖ People who are strong in logical-mathematical intelligence are good at **reasoning, recognizing patterns, and logically analyzing problems**. These individuals tend to think conceptually about numbers, relationships, and patterns.

Characteristics

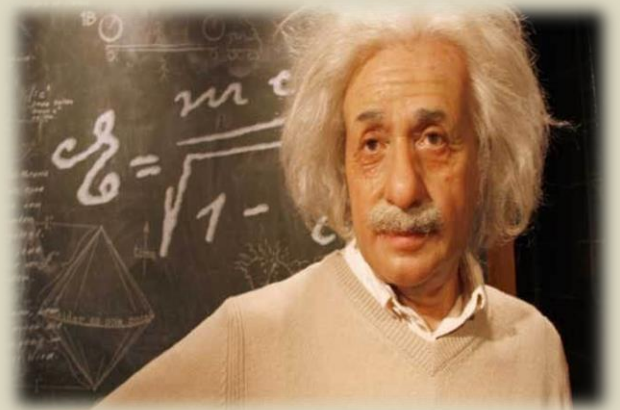

People with logical-mathematical intelligence:

- Have excellent [problem-solving skills](#)
- Enjoy thinking about abstract ideas
- Like conducting scientific experiments
- Can solve complex computations

Potential Career Choices

If you're strong in logical-mathematical intelligence, good career choices for you are:

- Scientist
- Mathematician
- Computer programmer
- Engineer
- Accountant

4. Bodily-kinesthetic Intelligence

- ❖ Those who have high bodily-kinesthetic intelligence are said to be good at **body movement, performing actions, and physical control.**
- ❖ People who are strong in this area tend to have excellent hand-eye coordination and dexterity.
- ❖ It is the process of performing physical movements effortlessly and comfortably due to the natural strength that one acquires which makes him skilled in movement sports, such as **bodybuilding, football and tennis.**

Characteristics

People with bodily-kinesthetic intelligence:

- Are skilled at dancing and sports
- Enjoy creating things with his or her hands
- Have excellent physical coordination
- **Remember by doing, rather than hearing or seeing**

Potential Career Choices

If you're strong in bodily-kinesthetic intelligence, good career choices for you are:

- Dancer
- Builder
- Sculptor
- Actor

5. Musical-Rhythmic Intelligence

- ❖ People who have strong musical intelligence are good at thinking in patterns, rhythms, and sounds. They have a strong appreciation for music and are often good at musical composition and performance.

Characteristics

People with musical intelligence:

- Enjoy singing and playing musical instruments
- Recognize musical patterns and tones easily
- Remember songs and melodies
- Have a rich understanding of musical structure, rhythm, and notes

Potential Career Choices

- Musician
- Singer
- Music teacher

6. Interpersonal Intelligence

- ❖ Those who have strong **interpersonal intelligence** are good at **understanding and interacting with other people**. These individuals are skilled at assessing the emotions, motivations, desires, and intentions of those around them.
- ❖ It is the knowing that happens when we work with and relate to other people, often as part of a team. This way of knowing also is used to develop a whole range of social skills that are needed for effective person-to-person communication and relating.

Characteristics

People with interpersonal intelligence:

- Communicate well verbally
- Are skilled at [nonverbal communication](#)
- See situations from different perspectives
- Create positive relationships with others
- Resolve conflicts in group settings

Potential Career Choices

If you're strong in interpersonal intelligence, good career choices for you are:

- Psychologist
- Philosopher
- Counselor
- Salesperson
- Politician

7. Intrapersonal

- ❖ **Individuals** who are strong in intrapersonal intelligence are good at being aware of their own emotional states, feelings, and motivations. They tend to enjoy self-reflection and analysis, including **daydreaming, exploring relationships with others, and assessing their personal strengths**.
- ❖ At the heart of this intelligence are our human self-reflective abilities by which we can step outside of ourselves and think about our own lives. This is the introspective intelligence. It involves our uniquely human propensity to want to know the meaning, purpose, and significance of things

Characteristics

People with intrapersonal intelligence:

- Analyze their strengths and weaknesses well
- Enjoy analyzing theories and ideas
- Have excellent self-awareness

Henry David Thoreau

Ralph Ellison

- Understand the basis for his or her own motivations and feelings

Potential Career Choices

If you're strong in intrapersonal intelligence, good career choices for you are:

- Philosopher
- Writer
- Theorist
- Scientist

8. Naturalistic Intelligence

- ❖ **Naturalistic intelligence** is mostly connected to the persons who are obsessed with nature and interested in exploring their environment, including forests, deserts and mountains. To put it in different words, they prefer to quit civilization to listen to **psithurism**.
- ❖ According to Gardner, individuals who are high in this type of intelligence are more in tune with nature and are often interested in nurturing, exploring the environment, and learning about other species

Characteristics

People with naturalistic intelligence:

- Are interested in subjects such as botany, biology, and zoology
- Categorize and catalog information easily
- Enjoy camping, gardening, hiking, and exploring the outdoors
- Dislikes learning unfamiliar topics that have no connection to nature

Conclusion:

- Although these intelligences are used by educators to create a better learning environment, this theory is criticized by some psychologist and teachers who compare these abilities as talents and personality traits.
- Despite the criticism, having extra information about these intelligences may aid us to discover our aspirations and desires.

IV. Constructivism النظرية البنائية

❖ **Jean Piaget** is considered the pioneer of this learning theory.

- Learners **construct knowledge of language** by themselves through exposure to the world or people and to languages (**experiences and interaction**), in this way the learners improve their linguistic knowledge. **Therefore, we can say that people learn from one another and not in isolation from others.**
- **Constructivism** is the theory that says learners construct knowledge rather than just passively take in information.
- **Learners use their previous knowledge as a foundation and build on it with new thing that they learn.**
- Their ‘background’ and “previous knowledge (schemas)” impact on how they are able to learn.

Principles of Constructivism:

1. Knowledge is constructed, rather than innate

- ❖ It means that knowledge is built upon other knowledge.
- ❖ They take bits and pieces and put them together in their own unique way, building something different than what another student will build.

2. People learn to learn, as they learn

- ❖ Each thing we learn gives us a better understanding of other thing in the future.
- ❖ Everything we learn provides us with a better knowledge of other things in the future.

3. Learning is an active process

- ❖ They need to do things in order to learn
- ❖ They need to engage in the world so they can be actively involved in their own learning and development.

4. Learning is a social activity

- ❖ Learning is directly associated to our connection with other people.
- ❖ Our teachers, family, and peers impact our learning.
- ❖ **“Educators are more likely successful as they understand that peer involvement is one of the keys in learning”**

5. Learning is contextual

- ❖ The things we learn and the points we tend to remember are connected to the things that are going around us.

V. Social constructivism

Lev Vygotsky's theory of cognitivism development in social relationships:

- It is founded **by Vygotsky**.
- The process of learning is based on interacting with people who know the language and through engaging within the society
- It focuses on the collaborative nature of learning.
- **Knowledge** develops from how people how interact with each other.
- Learning from others helps children construct their own knowledge and reality.
- It is closely connected to constructivism with **the added element of societal and peer influence**.
- It comprises cognitive structures that are still in the process of maturing, but which can only mature under the guidance of or in collaboration with others.
- **According to social constructivism**, every conversation or encounter between two or more people presents an opportunity for new knowledge to be obtained, or present knowledge expanded.
- **In SC, things are not real. They only exist because we give them reality through social agreement such as, books, money, etc. Our identity is created by interactions with our people.**
- **While Jean Piaget concluded that children cognitive development happens in stages, Vygostky rejected his ideas and believed that children develop independently in specific stages as result of social interactions.**

Language teaching approaches & Methods

Approaches:

Approach (how language should be taught)

I. Macro vs micro approaches

Macro (general) approaches	Micro (specific) approaches
❖ Competency based approach ❖ Standards based approach (they specify what we should include in the curriculum)	❖ Inductive/deductive approach (in grammar) ❖ Product /process approach (in writing) ❖ Bottom up /top down approach (in listening, reading and receptive skills) ❖ Lexical approach (in vocabulary)

1. Competency-based language teaching (pedagogical guidelines of middle school)

- The EFL curriculum in Morocco adheres to the competency based approach

1. Definition

- **Competency:** the ability to do something successfully and effectively.
- Competence based approach mainly *focuses on the outcomes of learning* and *addresses* what the learners are expected to do rather than on what they are expected to learn.
- It focuses on the how the student is able **to use the language successfully** in the real contexts rather than what he know about the rules or the layout of the letter.
- **It focuses on the outcome.**
- When students demonstrate a “**competency**”, they are demonstrating their ability to do something. **They are showing the outcome of the learning process.**

2. Characteristics

- ↗ It is organized around a set of learning tasks and activities that stimulate **the real life situations to prepare the student to use language in real contexts.** (giving advice, expressions of apologizing)
- ↗ Specific themes and situations are used as means to develop competencies and improve performances. (ex: unit one: humour, unit 2: formal and non formal education, etc.)
- ↗ **It is learner-centered.**
- ↗ **It is task-based.**
- ↗ It capitalizes on the performances that the learners should expect to attain, not just content to be covered.

3. Principles:

The assumptions underlying this approach:

- ✧ Language acquisition is fostered by **engaging learners in real tasks.**
- ✧ The language should be learned **the same way the mother tongue is acquired.**
- ✧ The learner should not be aware that they learn the language; we can use the target language as often as possible.
- ✧ Language learning is a problem-solving activity. We give them a problem task, and then they try to solve it.
- ✧ Learners express themselves freely in low-anxiety situations.
- ✧ Language tasks or activities must focus **on both content and form.**

4. The roles of the teacher

- ♠ To manage the classroom event.
- ♠ To monitor
- ♠ To provide the learners with effective learning opportunities.
- ♠ To adopt approaches those are responsive to the specificity of the teaching /learning context.
- ♠ To provide immediate feedback

5. Assessment

- ❖ In CBA, we have three modes of assessment:
- ❖ The curriculum requires:

A. Performance assessment:

- It is a process in which students apply their knowledge, understanding and skills in authentic context. **For instance, presentation, debate, dialogues, etc.**

B. Continuous assessment:

- The evaluation of a pupil's progress throughout a course of study. **For instance**, to ask questions, to check their understanding, to give exercises, to observe participation, working attitude, group progress and attendance.

C. Criterion-referenced standards:

- It is like achievement test. **(score and test)**
- Most tests and quizzes that are written by school teachers can be considered criterion-referenced tests. In this case, the objective is simply to see whether the student has learned the material.

2. The standards-based education

- ❖ This approach is adopted for the Secondary School (Common Core, First Year, and Second Year Baccalaureate).
- ❖ SBA focuses in both on **content**, **what students will learn**, and on **competence**, what students will be able to do with language. In the previous approach, it focuses only on the latter.
- ❖ SBA comes to complete CBA.

1. Characteristics

- ↗ It addresses what learners must know and be able to do with English (**content standards**—by the end of the course ,students will be able to use simple past) And of how close they are to achieving the aims of the course (performance standards--- by the end of the course ,students will be able to use simple past in paragraph---students will write a paragraph about their past habits)
- ↗ It addresses communication as being not strictly one skill, but a mixture of the spoken, written, and auditory skills.
- ↗ SBA states that a learner does not learn a language without being exposed to its culture.
- ↗ It connects English with other subject areas such as history, geography, etc.
- ↗ It is based on the view that argues that comparing and contrasting our own languages and culture(s) with other languages and culture(s) leads to better understanding of ours.
- ↗ It stresses the extension of language learning experience from the classroom to outside world.
- ↗ It is learner-centered.
- ↗ It requires performance-based assessment.

The teaching in level four (high school) should address five areas:

A. 5 C (5 goals or areas of SBA):

Communication:

- ❖ Learners will communicate in both oral and written forms, interpret both oral and written messages, and present oral and written information to various audiences for a variety of purposes.

Three modes of communication:

a. Interpersonal communication

Learners interact and negotiate meaning in spoken or written conversation to share information, feelings, etc. They are exposed to certain tasks to prepare them for the outside world.

Example:

- ✚ In the airport, in the hospital in the school, etc.
- ✚ Functions (expressing opinion, agreement, etc.)

Well, all these lessons are under the umbrella of IC.

b. <u>Interpretive communication</u>	Learners should be able to understand, interpret, and analyze what is heard, read, and viewed on a variety of topics. After they get their baccalaureate, students should be able to analyze texts and so on. <u>Example:</u> 🚦 Receptive skills(listening and reading) No response required in this communication
c. <u>Presentational communication</u>	Learners should be able to present information, concepts, ideas, to inform, explain, or persuade. <u>Example:</u> 🚦 Productive skills(writing and speaking)

Culture

- Learners will gain deeper understanding of their culture(s) and other cultures in terms of their **perspectives** (e.g. Values, ideas; attitudes, etc.), **practices** (patterns of social interactions), and **products** (e.g. books, music, food, etc.).

Connection

- Learners will make connections with other subject areas and acquire information. (Geography, history, etc.)

Comparison

- Learners will gain awareness of cross-cultural similarities and differences in terms of both language and culture.

Community

- Learners will extend their learning experiences from the EFL classroom to the outside world through activities such as, the use of the internet.

3. The natural approach

- ❖ The natural approach was developed by **Tracy Terrell and Steven Krashen in 1977 in a book called the latter ‘T T AND S K’**
- ❖ **It is based on the language acquisition theory; the native language should not be used in the classroom.**
- ❖ A lot of vocabulary should be exposed to students.
- ❖ It rejects the formal organization of language, and it focuses more on **communication and natural way of learning a language.**
- ❖ **The NA works based on the use of language in communicative situations without recourse to the native language and without reference to grammatical analysis.**

1. Natural order hypothesis:

- **Grammar is acquired in a logical sequence: past, then future.**
- **Yes/no questions before wh-questions.**

4. Communicative language-based approach

- ❖ **Contextualization is the basic principle.**
- ❖ **It was developed in 1970.**
- ❖ Language teaching should move beyond teaching grammar and vocabulary to the **study of meaning and functions.**
- ❖ It aims at developing the learners '**competence to communicate in the target language within real-life situations.**
- ❖ This approach is based on the idea that learning language successfully comes through having to communicate real meaning (learn by something that will help us in the real life).
- ❖ When we communicate, we use the language to accomplish some functions such as **arguing, convincing, and apologizing**, and we carry out these functions with a social context.
- ❖ **It is a learner-centered approach** because it gives the chance to the learners to learn by themselves, to involve in the process of learning.
- ❖ This approach helps the learner to develop not only the linguistic competence but also the communicative skills as **to what to say, how to say, when to say and where** in order to satisfy his daily needs as larger aim.
- ❖ **In this approach fluency and accuracy are equally important.**
- ❖ The teacher here is a co-participant not that of an authoritarian master.
- ❖ The teacher should provide all the recourses necessary for communication to be effective in every context.

1. Main features of the communicative approach:

- It emphasizes on the **meaning** rather than form.
- **The target language is used as a natural medium for classroom management and instruction.**
- Classroom should provide **rehearsal of real-life situations** and provide opportunity for real communication.
- **Emphasis on oral and listening skills in classroom.**
- **Use of everyday vocabulary.**
- **Contextualization** is fundamental premise. Meaning cannot be understood out of context.

For instance: (teach grammar structure in a meaningful context)

- ✚ If we want to teach the present continuous, we use real life situations.

5. Task-based language teaching (plan)

- It has roots in the communicative language teaching method, where the teaching process is done entirely through communicative tasks.
- In order to fully acquire language, it must have real meaning by being used in natural contexts.
- With task-based learning, teachers ask students to complete purposeful tasks that elicit the use of the target language.
- It refers to teaching the target language through specific tasks, such as going to the doctor, doing groceries or shopping, going to the bank, etc.
- The objective of the method is to teach learners communicative competence in English through meaningful and authentic activities.
- Its main job is to avoid boredom and assist language teachers by the immersing students into active learning by getting them to work on selected tasks.
- It focuses on communication through task completion.

Tasks or activities should have four kind of criteria:

- a. Focus on the meaning
- b. Some kind of gap such as information, etc
- c. Use your own linguistic resources.
- d. Having communicative outcome not simply display of language.

Types of tasks in Task-based language

A. Information gap activities:

- It allows sts to exchange information or learn things about each other.

B. Reasoning gap activities:

- Sts are asked to convey meaning from something you have given to them

C. Opinion gap activities:

- Sts, in this activities , are asked to share their own opinions or feelings about a specific situation.

Advantages	Drawbacks
→ Since the tasks mimic real-life situations, students get to improve: ♠ Their communication skills ♠ Their confidence ♠ Their motivation → Learners acquire a deeper understanding of the language. → They also bond with their classmates during lesson time	The lesson might fail if students are: ♠ Too excited ♠ Not motivated ♠ Too lazy

6. Learner-centered approaches

- It shifts the focus of activity from the teacher to the learners.
- The course is designed from the learner's perspective
- It aims at developing learner autonomy and independence by putting responsibility for the learning path in the hands of students
- It is based on the constructive learning theory that emphasizes the learner's critical role in constructing meaning from new information and prior experience.
- It places the learner at the center of the learning process.
- The instructor serves as a facilitator, involving learners in the learning process.
- Students work in groups or alone, depending on the activity.
- Students may answer each other's questions and use the instructor as a resource.
- **Active learning, cooperative learning, and inductive teaching and learning.**

Language teaching methods

History of language teaching methods

Pre-method era	Method era	Post-method era
❖ Methods that are not based on any scientific theory. 1. GTM 2. DM	❖ Methods that are based on scientific theories, researches and approaches. 1. ALM 2. CLL 3. SW 4. S 5. TPR 6. CLT 7. TBL	

I. Grammar Translation Method Vs Direct Method

	GTM	DM
The teacher	Authority	Partner
The student	Passive	Active
Teaching-learning process	Translation and memorization	• Associating meaning with the target language • Demonstration (body language) • Visual aids • Miming and modeling
Language used	Mother tongue	Target language
Interaction	T-S	T-S/ S-S /S-S
Error correction	Immediate correction Errors are not tolerated.	Self-correction
Grammar	Taught deductively (the teacher provides the rules, and then present examples)	Taught inductively (the teacher first presents examples, then he poses some questions to help students elicit the rule by themselves)

1. Grammar Translation Method

A. Definition

- ❖ It is a traditional way of teaching a foreign language, in which students spend a lot of time **reading texts and translating them, doing exercises, tests, writing essays.**
There is no focus on communication.

B. History

- The **GTM** was developed for the study of "**dead**" languages and to facilitate access to those languages' classical literature.
- It was primarily used to teach **sacred texts**.
- It is dating back to the late 19th and early 20th centuries.
- Also, it was used for the purpose of helping students read and appreciate foreign language literature.

C. Objectives

- Some teachers employ this method to give learners access to English literature and build in them **kinds of grammar, reading, vocabulary and translation skills necessary to pass the exams.**
- It focuses on **reading and grammar**.

D. Principles

- ♣ Classes are taught in **the students' mother tongue** with little active use of the target language
- ♣ **Much vocabulary is taught in the form of isolated word lists.**
- ♣ Little or no attention is paid to pronunciation,
- ♣ Reading and writing are prioritized, **little attention is given to speaking and listening**
- ♣ Literary language is superior to spoken language.

E. Techniques

- Translation of literary Passage.
- Reading comprehension questions
- Antonyms/synonyms (Finding antonyms and synonyms for words or sets of words)
- **Deductive application of rule**
- Fill-in-the-blanks

Advantages	Disadvantages
♣ Students master grammar. ♣ Students develop reading and writing skills. ♣ Students acquire a large number of lexia via memorization	♣ Speaking or oral communication is neglected ♣ Not all teachers are good at translating and don't know student's L1. ♣ There is no theory or literature that offers a rationale or justification for it that attempts to relate it to issues in linguistics or educational theory. ♣ It is boring.

2. Direct Method

A. Definition

- ❖ **The Direct Method** receives its name from the fact that ‘**meaning**’ is to be conveyed directly in ‘**the target language**’ through the use of demonstrations and visual aids: (**bringing pictures, realia=concrete objects**) with no recourse to the students’ native language.
- ❖ It was created in response to the previous method.

B. History

- It was developed by “**Maximilian Berlitz**” towards the end of the 19th century as a reaction to the Grammar Translation method
- **Basically, teachers began attempting to teach foreign languages in a way that was more similar to first language acquisition.**
- It incorporated techniques designed to address **all the areas that the Grammar Translation did not** - namely **oral communication, more spontaneous use of the language, and developing the ability to think in the target language.**
- The appearance of the “**Direct Method**” thus coincided with a new school of thinking that dictated that all foreign language teaching should occur in the target language only and with no translation.
- It did not take well in public education where **the constraints of budget, classroom size, time, and teacher background made such a method difficult to use.** People have started to come back to the latter method.

C. Objectives

- The basic premise of the **DM** is that students will learn to communicate in the target language, partly by learning how to think in that language through the use of realia and pictures, and by not involving L1 in the language learning process whatsoever.

D. Principles

- ♠ **Classroom instruction is conducted exclusively in the target language.**
- ♠ **Only everyday vocabulary and sentences are taught.**
- ♠ New teaching points are taught through modeling and practice.
- ♠ Both speech and listening comprehension are taught.
- ♠ Correct pronunciation and grammar are emphasized.
- ♠ The teacher should demonstrate (**through the use of objects like realia, pictures, maps which facilitate LL**), not explain or translate and students should make a direct association between the target language and meaning
- ♠ Language is primarily a speech, (the purpose of language learning is communication).
- ♠ The basic rule of DM is that ‘No translation is allowed’

- ♠ Lessons should contain some conversation activities so that Ss can use language in real contexts.
- ♠ Also, they should be encouraged to speak as much as possible.
- ♠ The teacher is a partner and guide for the students ; the latter are active participants.
- ♠ **The syllabus is based on situations or topic rather than linguistic structures.**

E. Techniques:

- Reading aloud.
- Student Self-Correction.
- Conversation Practice
- Dictation (Teacher reads passage aloud various amount of times at various tempos, students writing down what they hear)
- Paragraph Writing (Students write paragraphs in their own words using the target language and various models)

Advantages	Drawbacks
♠ It helps to promote fluency. ♠ It facilitates the learning of vocabulary items because of the use of visual aids and different techniques. ♠ It makes the process of learning enjoyable for students.	♠ It requires small class sizes, motivated learners and talented teachers in order to succeed really well. ♠ It neglects reading and writing. ♠ It fosters fluency over accuracy. ♠ It priorities speaking and listening. ♠ It is demanding for the teacher; they are supposed to have native-like accent and be fluent. ♠ It did not take well in public education where the constraints of budget, classroom size, time, and teacher background made such a method difficult to use

I. Audio-Lingual Method

- ❖ The goal of Audio-Lingual Method is to “**enable students to use the target language communicatively. (drills)**
- ❖ **ALM** is a method of language teaching that teaches **speaking and listening rather than reading or writing.**
- ❖ This method aims to develop **listening and speaking Skills through listening to dialogues with repetitions and drilling**

A. History

- The next revolution in terms of language teaching methodology coincided with **World War II. (America)**
- The "**Army Method**" was suddenly developed to build communicative competence in translators through **very intensive language courses focusing on aural/oral skills.**
- They had to be prepared for their tasks in shortcut intensive courses
- It was designed to teach soldiers to communicate with each other during this era of the war.
- It is based on two approaches, **behaviorism in linguistics theory of language learning, (psychology= Skinner), and structuralism in literature(view of language (linguistics= Bloom field)**

B. Objectives:

- The behavioral psychologists dictated the various ways for **the drills** to be **repeated in order to create an effective habit-forming process.**
- It was thought that the most effective way to do this was for students to "overlearn" the language being studied **through extensive repetition and a variety of elaborate drills.**

C. Principles

- ♠ New vocabulary and structures are presented through dialogues, the dialogues are learnt through **imitation and repetition**
- ♠ **The target language is used in the classroom not the students' native language.**
- ♠ **There is dependence on mimicry, memorization of set phrases, and overlearning.**
- ♠ **Drills are used to teach structural patterns, e.g. Tr: there is a cup on the table... repeat. Ss: there's a cup on the table. Tr: book. Ss: there's a book on the table.**
- ♠ **Speaking and listening competence preceded reading and writing competence.**
- ♠ Vocabulary is taught in context, when the word is put in context it'll be easily grasped.

- ♠ Focus is on pronunciation, (a teacher has to stress and correct the students whenever they mispronounce a word. So, Ss should keep repeating it till they get it right).
- ♠ Prevent students from errors, the latter is seen as **bad habits** that must be corrected immediately

D. Techniques used:

- **Dialogue Memorization**
- Drilling (students repeat all the vocabulary items,)
- Inductive teaching of grammar
- **PPP (Framework: Presentation-practice-production)**

Advantages	Drawbacks
♠ Oral use of language is emphasized. ♠ The skill of listening is developed. ♠ All students are engaged in the process of learning ♠ Through extensive mimicry, memorization and over-learning of language patterns and forms, students and teachers were often able to see immediate results.	♠ Writing is not given its due attention. ♠ Meaning is neglected (blind repetition of words or sentences) ♠ It does not focus on long-term learning.

II. Community Language Learning (CLL)

- ❖ This method aims at treating Ss as “**whole person**”.
- ❖ The teacher takes into consideration not only their ‘**minds**’, but their feelings as well.
- ❖ **CLL** is a language-teaching method in which students work together to develop what aspects of a language they would like to learn.
- ❖ It is based on the **Counselling-approach** in which the teacher acts as a **counsellor and a paraphraser, while the learner is seen as a client and collaborator**.
- ❖ It is certainly unique in that it is one of the first methods to be developed that really focused on the feelings of the students and tried to address affective factors in learning (particularly for adult learners).
- ❖ It was also the first method to combine the field of language learning with the dynamics and principles of **counseling**.

1. History

- It is based on **the humanistic approach**.
- (CLL) is a teaching method developed in the 1970s in the USA by **Jesuit priest, psychologist and educator Charles Curran**.
- The teacher plays the part of “**counsellor**”, while the learners are encouraged to work together, interacting and helping each other personally in a supportive community.
- Learners were to be considered not as a class, but as a group.
- It dictated that students were to be thought of as “**clients**”.

2. Principles

- Students are to be considered as “**learner-clients**” and the teacher as a “**teacher-counselor**”
- Students are permitted to use their native language, and are provided with translations from the teacher which they then attempt to apply.
- **Grammar and vocabulary are taught inductively**.
- **Students are encouraged to express not only how they feel about the language, but how they feel about the learning process**, to which the teacher expresses empathy and understanding.
- **Affective factors are considered as paramount in the learning process**.
- Students should be at the center of learning and teaching process

- **It is a learner-centered approach.**
- **Learning cannot take place if students don't feel relaxed and comfortable.**
This is the basic principle of CLL.
- Mistakes are not considered obstacles for learners. They are just a part of learning.
- Pronunciation is developed by reading out loud.
- Errors are corrected in a non-threatening way; the teacher repeats correctly what the student has said incorrectly.
- **The syllabus is designed primarily by the students in the beginning.**
- Students typically sit in a circle, with the teacher (**as counselor**) outside the ring.

3. Objectives:

- Learning in a non-defensive manner is considered to be very important.

4. Techniques used:

- ♣ The most famous technique is **group work and workshop as well**
- ♣ **Translation**
- ♣ **Inductive teaching of grammar**
- ♣ **Repetition**
- ♣ **Transcription**
- ♣ **Reflection on experience**
- ♣ **Small Group Tasks**

Advantages	Drawback
♣ Students learn social and communicative skills. ♣ Students' inhibitions are lowered, promoting favorable environment for learning to take place. ♣ It promotes the learner autonomy	♣ Not all teachers are good translators (they may not know the mother tongue of the students) ♣ Time-consuming. It takes time to prepare the activities. ♣ It does not work for large classes. ♣ Fluency over accuracy. ♣ The use of the mother tongue. ♣ The method goes too far in the direction of affective factors at the expense of other considerations. ♣ It certainly is not a method could be recommended for students who are learning English as part of a standard, compulsory education curriculum. ♣ The method assumes that students intrinsically want to learn the new language, and that is not always the case. ♣ The teacher must be fluent in both the target language and the students' mother language. ♣ It cannot be used for large or very large classrooms,

III. The silent way

- ❖ **The Silent Way** is the name of a method of language teaching devised by **Caleb Gattegno**.
- ❖ It is based on the premise that the **teacher should be silent as much as possible in the classroom** but **the learner should be encouraged to produce as much language as possible**.
- ❖ **The teacher must not interfere with the learning process**
- ❖ **Imitation and drill** are not the primary means by which students learn. **Vs ALM**
- ❖ **Trial and error** are very important means by which students learn.
- ❖ **The teacher is typically stayed “silent” most of the time**, only giving help when it is absolutely necessary.
- ❖ **Learning is facilitated by problem solving involving the material to be learned.**

1. Objectives

- It attempts to minimize the **TTT**
- It gives more chances to students to speak
- Teachers using the **SW** want their students to become **highly independent and experimental learners**.
- **Making errors** is a natural part of the process and a key learning device, as it is a sign that students are testing out their hypotheses and arriving at various conclusions about the language through a trial and error style approach.
- The teacher tries to facilitate activities whereby the students discover for themselves the conceptual rules governing the language, **rather than imitating or memorizing them** –
- **It encourages autonomous learning, problem solving, and work group.**

2. History

- **It is based on the humanistic approach**

3. Principles

- **Learning is facilitated by accompanying (mediating) physical objects.**
- Learning is facilitated by problem-solving involving the material to be learned.
- The most prominent characteristic of the method was that the teacher typically **stayed "silent" most of the time, as part of his/her role as facilitator and stimulator, and thus the method's popular name.**
- **Language learning is usually seen as a problem solving activity** to be engaged in by the students both independently and as a group, and the teacher needs to stay out of the way in the process as much as possible.
- The underlying principles here are that learners become increasingly autonomous in, active with and responsible for the learning process in which they are engaged.

4. Techniques used:

- ✓ Teacher's Silence (**Teacher is generally silent, only giving help when it is absolutely necessary**)
- ✓ **Peer Correction**
- ✓ Self-correction Gestures (Teacher uses hands to indicate that something is incorrect or needs changing - **eg. using fingers as words then touching the finger/word that is in need of correction**)
- ✓ Structured Feedback (**Students are invited to make observations about the day's lesson and what they have learned**)
- ✓ Pronunciation charts

Advantages	Drawbacks
♠ Less TTT ♠ Students develop pronunciation; they speak 90% of the time. ♠ Self-satisfaction.	♠ It is time consuming (Ss may struggle to understand a word for a while, whereas it can be explained easily by the teacher. ♠ Not all students are motivated. ♠ It is criticized as being too focused on building structure, and misses out on cultural input through the language, and the silence of the teacher can prevent students from hearing many active models of correct usage that they may find useful. ♠ It can take a lot of time and money. ♠ In order to maximize the learning potential of students using the Silent Way, teachers would have to be prepared to invest quite heavily in materials.

IV. Suggestopedia (desuggestion)

- ❖ It is known for the use of **soft music**.
- ❖ Students should **feel relax and comfortable**.
- ❖ **Music** helps to eliminate anxiety and stress from the part of the students.
- ❖ It focuses mainly on **reading, writing, and speaking**, but it neglects **grammar**.

1. History:

- **It is based on the humanistic approach.**
- In the late 70s, **Georgi Lozanov** introduced the contention that students naturally set up psychological barriers to learning - based on fears that they will be unable to perform and are limited in terms of their ability to learn.
- **Lozanov** believed that learners may have been using only 5 to 10 percent of their mental capacity, and that the brain could process and retain much more material if given optimal conditions for learning.
- **Lozanov** began to develop a language learning method that focused on "**desuggestion**" of the limitations learners think they have, and providing the sort of relaxed state of mind that would facilitate the retention of material to its maximum potential. **This method became known as Suggestopedia.**

2. Objectives:

- The provision of a relaxed and comfortable learning environment,
- **The use of soft Baroque music to help increase alpha brain waves and decrease blood pressure and heart rate,**

3. Principles:

- **Lozanov** used relaxed music to create a level of relaxed concentration that facilitated **the intake and retention** of huge quantities of material.
- Another aspect that differed from other methods to date **was the use of soft comfortable chairs and dim lighting in the classroom (other factors believed to create a more relaxed state of mind).**
- **The teacher assumes a role of complete authority and control in the classroom.**
- Self-perceived and psychological barriers to learners' potential to learn are "**desuggested**".
- Students are encouraged to be child-like, take "mental trips with the teacher" and assume new roles and names in the target language in order to become more "**suggestible**".
- **Baroque music** is played softly in the background to increase mental relaxation and potential to take in and retain new material during the lesson
- **Errors are tolerated**, the emphasis being on content and not structure.
- **Music, drama and "the Arts"** are integrated into the learning process as often as possible.

4. Techniques used:

- ♠ **Music, fine arts, visual aids, relaxation.**
- ♠ **Classroom Set-up** (Emphasis is placed on creating a physical environment that **does not** "feel" like a normal classroom, and makes the students feel as relaxed and comfortable as possible)
- ♠ **Peripheral Learning** (Students can absorb information "effortlessly" when it is perceived as part of the environment, rather than the material "to be attended to")
- ♠ **Visualization** (Students are asked to close their eyes and visualize scenes and events, to help them relax, facilitate positive suggestion and encourage creativity from the students)
- ♠ **Choose a New Identity** (Students select a target language name and/or occupation that places them "inside" the language language they are learning)
- ♠ **Role-play** (Students pretend temporarily that they are someone else and perform a role using the target language).

5. Advantages:

- It creates favorable climate for the learning to occur.
- Students feel at ease.
- Students increase their abilities.

6. Drawbacks:

- It lacks flexibility (not applicable to all classes)
- It lacks tests.
- Negligence of grammar.

V. Total physical response

- ❖ It is based on **the humanistic approach**.

1. THE CHARACTERISTICS OF TPR

- Learners play the roles of listener and performer.
- Learners monitor and evaluate their own progress.
- **Reading and writing** are taught after **grammar and vocabulary**.
- Grammar is **taught inductively**.
- Learning language **by gesture (body movements)**.
- The teacher and the students **are the actors. (Low-stress environment)**
- Students should be more **active and talkative**.

2. Objectives:

- **I believe this makes it a great method for young learners before they develop enough cognitively to start considering more abstract concepts.**

3. Principles:

- ♣ The teacher directs and students "act" in response - **"The instructor is the director of a stage play in which the students are the actors"**
- ♣ **Listening and physical response skills** are emphasized over **oral production**.
- ♣ Whenever possible, **humor** is injected into the lessons to make them more enjoyable for learners
- ♣ **Students are not required to speak until they feel naturally ready or confident enough to do so.**
- ♣ **Spoken language** is emphasized over written language.

4. Techniques used:

- Role Reversal (**Students direct the teacher and fellow learners**)
- Miming, commands and games

Advantages	Drawbacks
▪ It is an excellent method for young/beginning teachers to learn, as TPR lessons tend to be a lot of fun and the techniques involved are relatively simple. ▪ It tends to involve humor in the same way TPR does, but involves the students more personally and more creatively. ▪ It had elements of learner autonomy and problem-solving. ▪ No direct translation to the native language ▪ Comprehension is simple and easy; when the teacher is using his or her body language, and students provide physical response, It becomes easy for them to remember. ▪ Learning is fun and enjoyable since it involves movement and games.	▪ It cannot be used to explain abstract notions or concepts. Not all the things we do are "physical" and not all of our thinking is orientated around the visible physical universe. ▪ Challenging for shy students. ▪ Students don't express themselves, they only respond to commands of the teacher. ▪ As with any other method or technique style, overdoing it will eventually create boredom and a feeling of repetition, which is enjoyable for neither students nor teachers.

VI. The natural approach

1. History:

- **Stephen Krashen and Tracy Terrell** developed **the Natural Approach** in the early eighties (Krashen and Terrell, 1983), based on Krashen's theories about second language acquisition.

2. Principles:

- The approach shared a lot in common with **Asher's Total Physical Response**
- There should be a lot of language "**acquisition**" as opposed to language "**processing**", and there needs to be a considerable amount of comprehensible input from the teacher.
- **Meaning** is considered as the essence of language and vocabulary (**not grammar**) is the heart of language
- Students listen to the teacher using the target language communicatively from the very beginning.
- In early stages, students are not corrected during **oral production**, as the teacher is focusing on meaning rather than form (unless the error is so drastic that it actually hinders meaning).

There are three generic stages identified in the approach:

- a. Preproduction - developing listening skills;
- b. Early Production - students struggle with the language and make many errors which are corrected based on content and not structure;
- c. Extending Production - promoting fluency through a variety of more challenging activities.

3. Techniques used:

- Communicative activities prevail throughout a language course employing the Natural Approach, focusing on a wide range of activities including games, role plays, dialogs, group work and discussions.

VII. The communicative language teaching approach CLT

- ❖ It is based on the **humanistic approach and communicative approach**
- ❖ It focuses not only on the language competence, grammar and vocabulary, but also on **developing the strategy competence, the culture competence, sociolinguistic competence, etc.**

1. History:

- This broad "approach" to language teaching that encompassed various methods, motivations for learning English, types of teachers and the needs of individual classrooms and students themselves.
- It would be fair to say that if there is any one umbrella approach to language teaching that has become the accepted "norm" in this field, it would have to be the **Communicative Language Teaching Approach**.
- **This is also known as CLT.**

2. Objectives:

- **It aims at helping students to speak like native speakers.**

3. Principles:

- **An emphasis on learning to communicate through interaction in the target language.**
- The provision of opportunities for learners to focus, not only on the language but also on the learning process itself.
- An enhancement of the learner's own personal experiences as important contributing elements to classroom learning.
- An attempt to link classroom language learning with language activation outside the classroom.

4. Techniques used:

- **Oral practice and production (students in the classroom need to practice the language orally and this method provides a native-like environment for students)**
- **Stimulation of real life situations using the target language.**
- **It follows the order of "presentation, controlled practice, free practice, interactive activities"**
- **Group work.**
- **Wh questions: students ask each other to communicate and to develop their speaking skill.**

Advantages	Drawbacks
♠ Students develop communicative skills. Students practice language in real-life situations	♠ Only everyday language is taught, while other forms of language are not taught. ♠ Students learn grammar unconsciously; when you ask them about for instance past simple, they will not know its uses. ♠ Writing and reading are overlooked.

The learner

I. Learner differences: catering for learner' needs and differentiating instruction

Factors that influence the acquisition of a foreign language:

1. Age

- Critical period hypothesis
- Children, adults adolescents

2. Sex

the sex of the students makes a significant difference in learning a second or foreign language”

3. Motivation and attitude

Without any motivation or positive attitude, there can hardly be a successful process of learning.

- Global motivation, which consists of a general orientation to the goal of learning a foreign language;
- Situational motivation, which varies according to the situation in which learning takes place;
- Task motivation, which is the motivation for performing particular learning tasks.
- Researchers also differentiate between:
- 1 integrative motivation – learners wish to identify with the target ethnolinguistic group (although this is far more significant in second than in foreign language acquisition),
- 2 instrumental motivations – learners study to improve their social status or meet educational requirements.

4. Learning styles

5. Intelligence and aptitude

6. Levels

7. Educational backgrounds

8. Cultural backgrounds

Motivation

Types of motivation:

- ❖ The first person is extrinsic motivated. He is playing football for external rewards. He wants a cup, medal, or money. This is called extrinsic motivation.
- ❖ The second person is intrinsic motivated. He is playing football for internal rewards. He is looking for happiness or enjoyment. This is called intrinsic motivation.

The same thing happens in classroom. There are two types of students.

- There are some students who learn just to get good grades and avoid punishment – extrinsic motivation.
- On the other hand, there are some other students who wants to learn just for enjoyment & self-improvement – intrinsic motivation.
- Therefore, as a teacher, you have to adopt different methods & ways to motivate your students. You might bring food & candies to the ones who are always looking for your approval. You may praise them as well. However, you could bring articles, short stories, and pens to those who learn just to enjoy themselves.

Anxiety

Types of anxiety:

1. Facilitative anxiety:

- It assists performance. It is the level of anxiety which is perceived as motivating. People with this kind of anxiety interpret stressors as challenges instead of threats.
- Perceiving anxiety as facilitative has been found out to be positively associated with academic performance and negatively associated with emotional exhaustion.
- It is suggested that it is beneficial to label anxiety as facilitative.

2. Debilitative anxiety:

- It interferes with performance. It is the level of anxiety which is perceived as the threatening.
- Studies have shown that sts who experienced debilitating test anxiety had lower average class scores for the semester.

Self-esteem

- People need some degree of self-esteem, self-confidence in order to succeed in any activity.
- By self-esteem, we refer to the evaluation which the individual makes and customarily maintains with regard to himself; it expresses an attitude of approval or disapproval, and indicates the extent to which an individual believes himself to be capable, significant, successful and worthy.
- People develop their sense of self-esteem as a result of the information they receive about themselves from others.

Social comparison theory:

- The way people compare themselves with others
- **It** claims that classroom interactions have a great influence on how learners perceive their abilities. Their sense of achievement is strongly affected by the information they get from the teacher and their peers in the classroom.
- Teachers should realize that they influence not only students' academic performance but also their emotional states. They should create such atmosphere in the classroom that will help to build students' confidence and lead them to success. The results of the research suggest that self-esteem is an important variable in SLA. Many studies show a positive relationship between high self-esteem and academic achievement

Introversion and extroversion

1. Introversion

- ❖ Introverts are people who tend to prefer a quiet, calm atmosphere and may become overstimulated or drained by busy or fast-paced environments. Extended or intense social interactions tend to deplete their energy, and they often prefer spending time in a quiet environment after interacting in a busy social setting.
- ❖ While shy students are afraid of speaking out because they fear being judged by their peers, introverted students have no such fear and can often be extremely self-confident. They are not likely to be motivated by a participation grade.
- ❖ An introvert is someone who gains his/her energy from being alone.

Tips to encourage introverted students :

A. Make the lesson deep and meaningful.

Introverted students are often quiet because they are deep thinkers. They enjoy lessons that challenge their world view and force them to really chew on a concept in their brains.

B. Give them time to formulate their thoughts.

Teachers know that all students need time to think after asking a question and are often trained to give plenty of wait-time. Introverted students need that more than others. They are not going to speak until they've had a chance to fully flesh out their thoughts.

C. Give them plenty of time to be alone.

Introverted students prefer low-stimulation environments, so a classroom that is fast-paced and constantly moving from one activity to the next is likely to wear them out. Allow introverts to have longer-term projects that they can really focus on over several class-periods and that they can work on by themselves

D. Give them alternate means of participation.

In today's world, it's naïve to think the only way to participate is by speaking in a group discussion. Introverted students thrive on the internet, mostly because of the asynchronous discussions that happen on them. Allow students to tweet, blog, or participate in forums as means of participating.

2. Extroversion

- ❖ They are people who tend to be outgoing, energetic, and willing to engage with others. According to Jung, extroverts tend to be interested in the people and things around them. They are sociable and often more outwardly confident and less fearful. However, they may also be too eager to please, avoid time alone, and be less capable of self-reflection.
- ❖ Extrovert” who gains his/her energy from being around others.

Tips to encourage extroverted students :

A. ENCOURAGE constant involvement.

A student who is an extrovert may be the one who is constantly raising his/her hand, wanting to volunteer, asking to help out. This is okay. As long as fairness exists in the classroom, where all have the opportunity to participate in tasks, students who want to be involved should not be discouraged.

B. Integrate partnerships in reading and writing

These learners have the opportunity to express themselves verbally. The way in which they process learning is through dialogue. If there are not enough experiences for these learners to share and chat about, they may stop participating and lose the joy of learning altogether. Keep them engaged by offering numerous opportunities for partner and group work

C. RESPECT their independence.

Many times these individuals enjoy being social, but prefer to do tasks on their own without too much influence from others. They like to start and finish projects on their own. Let them!

D. COMPLIMENT them often.

Extraverts tend to like a lot more positive reinforcement, publicly. They liked to be the one whose example is shown, or asked to the front of the room to share or read. This makes them feel special and valued

E. SURPRISE them.

Unlike introverts who like to know what is coming next and how to prepare, extraverts like to be surprised. It helps them stay engaged and excited. They like to learn there is something new on their desk in the morning from “Mr. Pumpkin”, and love the thrill of an assembly. They may even think a guest substitute teacher is sometimes “fun”.

Learning styles

I. Definition

- ❖ Our learning style influences how we like to learn and how we learn best.
- ❖ **A learning style** is the way that different students learn
- ❖ **A learning style** is a set of preferences that you have when you approach learning.
- ♠ **As teachers, we have to have a variety of activities**

II. Different Learning Styles

1. Visual

- You prefer to use **pictures, diagrams, images** and **spatial** understanding to help you learn.

2. Verbal

- Words are your strongpoint. You prefer to use words both in speech and in writing.
- They learn better when there is presentation, roles, debates, writing, etc.

3. Analytic

- They learn better if they analyze things.

4. Individual

- They prefer to learn alone.
- They use self-study and prefer their own company when learning.

5. Group

- They like to learn new things as a part of a group.
- Explaining your understanding to a group helps you to learn.

6. Autonomous

- They depend on themselves when they learn.

7. Kinesthetic

- They use their hands, body and sense of touch to help them learn.

8. Auditory

- They learn much better if they listen to things
- They prefer using sounds or music or even rhythms to help you learn.

9. Combinatory

- Your learning style is a combination of two or more of these styles.

Lesson planning

I. What is a Lesson Plan?

- ❖ A lesson plan is a teacher's detailed description of the course of instruction.
- ❖ A daily lesson plan is developed by a teacher to guide class learning. Details will vary depending on the preference of the teacher, subject being covered, and the needs of the students.
- ❖ A lesson plan is a teaching tool, that helps the teachers in deciding what to teach (content), why to teach (the goal), when to teach (time) and how to teach (techniques, strategies, etc.) in classroom while teaching.

II. Purpose of the Lesson Plan?

- *It is used as guide for the teacher and provide direction*
- *It gives the teacher a sense of security and confidence*
- *It helps keep good classroom management*
- *It suggests a level of professionalism and real commitment.*
- *Evaluation.*

III. What to Consider When Planning?

1. Know your student

- Their ability & interest level
- Backgrounds
- Ability to work together in groups
- Prior knowledge and learning experiences

2. Know the content

- Subject matter that you will be teaching
- National/state curriculum standards.

3. Know the instructional material

- Technology, software, audio/visuals, equipment, , speaker, etc.

4. Know how to assess

- Mode of assessment
- It can be written or oral
- It can even be on going through the lesson (**continuous assessment**)

IV. Principles of Lesson Planning

Each lesson plan should be based on these five guiding principles:

A. Variety

→ The lesson plan should contain a various activities for different reasons.

Why vary?

- ✦ To meet different learning styles and intelligence types.
- ✦ To keep them interested and avoid monotony.
- ✦ To avoid boredom.

What to vary?

- ✦ Content—Activities--- Interaction modes---Materials—Aids, timing, etc.

B. Coherence

- An activity in a lesson builds on a previous one and prepares for the next.
- It must be a connection among all the activities adopted.
- The teacher should always find a way to move smoothly from one activity to another, or stage to another without makes students feel that transition.

C. Challenge

- Learners are intelligent human beings and come to class with knowledge previously acquired.
- The new lesson should add to that knowledge without excess.
- No learning happens if the lesson doesn't present new items beyond students' prior knowledge.

D. Flexibility

Two dimensions:

- ❖ The ability to use a number of different techniques and not be slave to one methodology.
- ❖ The ability to change the plan if it shows inappropriacy to the classroom real situation for one reason or the other.

E. Balance

- The lesson is a mixture of a number of ingredients: **techniques, activities, content, etc.**
- The teacher should not exceed over using many and many activities, and he should not use again less number of activities.
- The successful teacher is the one who knows the right dosage of activities and tasks.

V. What a Lesson Plan Looks Like

→ Like most activities, a lesson plan has stages: a beginning, middle, and an end.

↓ Lessons usually begin with **warm up and/or review activities**. The teacher needs to decide how they will connect the day's lesson to the previous class meeting and how they want to interest and motivate their students for the day's activities.

↓ Once warmed up, the class is then ready for the presentation and practice stages of the lesson.

↓ These stages have been referred to with a variety of labels such as,

✚ **Into, through, beyond (Brinton, Goodwin, and Ranks 1994)**

✚ **Engage, study, activate (Harmer 1998)**

✚ **Lead- in, elicitation, explanation, accurate reproduction, and immediate creativity (Harmer 1991).**

✚ **Verbalization, automatization, and autonomy (Ur 1996)**

↓ All of these labels describe stages in which:

1. First,

- The language form or content is introduced and presented

2. Second

- Comprehension is checked before a form of guided practice is implemented.

3. Third

- Some type of less structured, communicative activity takes place so that students can practice what they have just learned in a less controlled, more natural situation. The communicative stage also provides an opportunity for students to integrate the new knowledge presented in the lesson with previous knowledge.

4. Finally

- Teachers and students should evaluate how well the new material has been labeled in order to determine the shape of future lessons.

VI. What are the Most Important Elements of a Lesson Plan?

1. Objectives

- A learning objective is a statement of what students will be able to do when they have completed instruction.
- Learning objectives should be **brief, clear, specific statements of what learners will be able to do at the end of a lesson** as a result of the **activities, teaching and learning** that has taken place.

- Learning objectives should be SMART:

a. Specific

- b. Measurable: we should use concrete and measurable words.

For instance:

- ✚ Students will be able to use, to write but not to know.

- c. Attainable: the learning objectives should be achievable.

- d. Relevant: it should be related to the content.

- e. Time bound: We specify the time limit in which these objectives should be met.

2. Instructional materials

- They are the tools used in educational lessons, which include active learning and assessment. Basically, any resource a teacher uses to teach his student is an instructional material.

3. Stages

- Stages are the steps or phases followed by the teacher to deliver his lesson.

4. Procedures

- The procedure is the body of your lesson plan, the ways in which you will share information with students and the methods you will use to help them assume a measure of mastery of that material.
- The teacher will use the text book to ask students
- The teacher will use activity number one.

5. Strategies

- A **teaching strategy** is the method you use to convey information to your students. There may be a particular strategy that works well with your group of students this year and will not work with your students the next year. Because of this, it is important to have lots of teaching strategies in your toolbox.

6. Interaction format (mode of work, pattern of interaction)

- Using the right interaction pattern is a fundamental factor in the success of any activity and the achievement of aims

The interaction patterns are:

- ♠ **Teacher to the whole group (T-Ss)**
- ♠ **Pair works (S-S)**
- ♠ **Group work (Ss-Ss)**

7. Time

- The instructor must think through how much time each facet or stage of the lesson will take with the goal of fitting the lesson objectives with the allotted time.
- How much time with each activity.

8. Teaching aids (materials)

- Are you going to use **the white board, the handout, pictures, realia, body language ,etc?**

9. Class level

- First grade, second grade, first bac, second bac.

10. Anticipated problems

- What are the problems that students may face?

VII. The Framework of Teaching English

1. PPP Which stands for:

- ❖ It is the most commonly used because we can use it **with high achievers with low achievers**, and we can use it **inductively or deductively**.
- ❖ It is deductive in its nature. **(grammar and speaking)**

A. Presentation

→ In which you present the lesson

B. Practice

→ In which students practice the knowledge, do exercises, assignments, and activities about that lesson.

C. Production

→ Students produce what they have learned.

2. OHE

A. Observe

→ Students observe the language and structure.

B. Hypothesis

→ Control of the activities

C. Experiment

→ They use what they have learned

3. ECRIF

- ❖ It is a good balance between task-based and PPP.
- ❖ Inductive—speaking
- ❖ It is mainly for speaking.

A. Encounter:

→ Students encounter the target language through activity focused on meaning.

a. (Clarify)

b. (Remember)

B. Internalize

→ Students internalize (memorize) the target language with scaffold practice activities.

C. Fluently use

→ Students use the target language from their memory on their own in a speaking task.

4. PDP

→ It is used with receptive skills.

VIII. There are Three Stage of a Lesson

PRESENTATION:

Step Up

Procedures

- ♠ Lead in questions/color coding
- ♠ Visuals/ highlighting (underling all the forms of the verb to be =)

Materials

- ♠ Textbook, board /pic, handout

Techniques

- ♠ Guessing prediction
- ♠ Contextualization
- ♠ Highlighting

Timing

- ♠ Activity 10 to 15 minutes

Mode of work

- ♠ Activity 1 pair
- ♠ Activity 2 individual

PRACTICE:

Procedures

- ♠ Students will complete the activity 1: gap fill in

Materials

- ♠ Textbook
- ♠ Picture is a material(asking students about the picture is a technique)
- ♠ The board alone is a material(using the board is a technique)

Techniques

- ♠ Highlighting
- ♠ Eliciting
- ♠ Using visual aids
- ♠ Using the board

Timing

- ♠ 20 minutes

Mode of work

- ♠ Activity 1 pair

Elhannaoui Mohamed

Step Up

- ♠ Activity 2 individual

PRODUCTION:

Procedures

Materials

- ♠ Textbook, board /pic, handout

Techniques

- ♠ Guessing prediction
- ♠ Contextualization
- ♠ Highlighting

Timing

- ♠ Activity 10 to 15 minutes

Mode of work

- ♠ Activity 1 pair
- ♠ Activity 2 individual

Teaching Language Skills & components

How to Teach Reading

I. Introduction

1. What is reading ?

→ It is a **receptive skill** by which students acquire knowledge through being exposed to the written text.

2. Why do we read ?

→ We read for **purpose and entertainment**.

II. What are the reading sub-skills?

1. Skimming

→ To read a text quickly to get a general idea of what it is about.

2. Scanning

→ To read a text quickly to pick out specific information, **e.g. finding a phone number in a phone book**.

3. Summarizing

→ To take out the main points of a long text, and rewrite or retell them in a short, clear way.

4. Proofreading

→ To read a text in order to check whether there are any mistakes in spelling, grammar, punctuation, etc.

5. Inferring (attitude/feeling/mood)

→ To decide how a writer or speaker feels about something from the way that they speak or write, rather than from what they openly say or the words they use.

6. Prediction

→ To use clues like headlines or pictures or general knowledge about the text or topic to make it easier to understand what you read or hear.

7. Listening/ reading for detail

→ To listen to or read a text in order to understand most of what it says or particular information.

8. Deducing meaning from context

→ To guess the meaning of an unknown word by using the information in a situation and/or around the word to help.

9. Using interactive strategies

- To use strategies when speaking to keep people involved and interested in what is said or to keep communication going, e.g. eye contact, use of gestures.

10. Listening/reading for gist

- To understand the general meaning of a text or a recording, without paying attention to specific details.

11. Intensive listening/ reading

- To read or listen and to focus on how language is used in a text.

12. Note-taking

- To listen and write down ideas from the text in short form.

13. Editing

- To shorten or change or correct the words or content of some parts of a written text to make it clearer or easier to understand.

14. Paraphrasing

- To say or write something that has been read or heard using different words.

III. What are reading strategies

Intensive R	Extensive R
→ Inside classroom → Short texts (1 to 3 pages)	→ Outside classroom: at home, in the forest, in the street, etc. → Long texts (novels, stories, etc.)
<u>Purpose</u> → To learn and study the language. → It is a reading method wherein learners are supposed to read the short text carefully and deeply so as to gain maximum understanding and do tasks.	<u>Purpose</u> → For pleasure
As educators, we focus mostly to finish the program and inside activities.	→ Our purpose should be encouraging students to study at home. <u>How?</u> ▪ We suggest and tell our learners that everyone will buy a short story, and then your job is exchange every week a story. ▪ We can suggest a website in which they will watch, listen, and read short stories.

IV. Two processes to understand the text

Top-Down	Bottom-Up
General top specific (predict using the prior knowledge)	→ Specific to general
	Within the text: when you ask students to give you the opposite of a word in a paragraph. Outside the text: it is when you pre-teach vocab.
Top-down processing of language happens when someone uses background information to predict the meaning of language they are going to listen to or read. Rather than relying first on the actual words or sounds (bottom up), they develop expectations about what they will hear or read, and confirm or reject these as they listen or read.	→ Bottom-up processing happens when someone tries to understand language by looking at individual meanings or grammatical characteristics of the most basic units of the text , (e.g. sounds for a listening or words for a reading), and moves from these to trying to understand the whole text.
Example:  Asking learners to predict what a newspaper article might be about from the headline or first sentence will encourage them to use top-down processing on the article.	Example:  Asking learners to read aloud may encourage bottom-up processing because they focus on word forms, not meaning.

V. Stages of reading skill

1. Pre:

Techniques:

→ Lead-in questions, visual aids, using pictures, realia, **Pre-teach vocab:** students may not know about pigmies, and brainstorming.

Example:

- Hello, my friends! How are you great! Yees! Look at the picture! What do you see?
How many people are there? Do you think they are one family? Small or big family?
Can you guess where they from are?
- Now, read the title what do you think? Pigmies (I should write it on the board) now, is it a verb or a noun? Singular or plural! Great! What do we mean by pigmies ! are they tall or small?
- This activity prepares them, motivates them, and builds interest for the next reading.

2. While:

→ **True or false (justify) activity: specific information**

3. Post:

- It is to make reading as communicative approach.
- It is to make students use their own words and ideas.
- **Discuss with your partner's why the Pigmies' life is difficult**

Pre-reading

- Use a picture to activate background knowledge.
- Pre-teach vocabulary.
- Use the title to predict the content of the text.
- Lead-in question

While reading

- Answer **gist** questions (**Wh-questions**).
- Read the text in **detail**. (**true/false questions**)
- Match sentence halves about the text content.
- Cut and mix the lines (sentences) of the text. Students order the jumbled sentences

Post-reading

- It is one hundred percent students' job.
- Write a description
- Do you agree or disagree with the writer's ideas?
- Compare and contrast.
- Role play
- Sts write a dialogue between the characters
-

**They can write and then they will go to the board. Role play.(they are moving from fluency to accuracy).
Pair to the board.**

The stage where students link what they read to their personal life.

VI. What is the difference between Pre-reading and warm up?

Pre- reading	Warm up
→ It is more specific to the text.	→ It is an activity outside the lesson but is connected to it. → It can be part of the pre or it can be alone.
	▪ Hey! How are you? What did you do last weekend?

How To teach Listening Actively

I. Introduction

1. What is listening?

- Listening is a **receptive skill**.
- Listening is about **responding** to language more than producing it and making a meaning of the language sounds.
- Listening refers to your **understanding** of spoken language.

II. Challenges that students and teachers may face

- ♠ Learners have no control over the speed of the text.
- ♠ There is noise in the recording.
- ♠ **Listening takes place in real life.**
- ♠ Speakers in the listening have different accents.
- ♠ Learners have no time to pause and think about the content of the text.
- ♠ Speakers in conversation speak quickly.

III. Things to consider

- Your job as a teacher is **to pave the way, to prepare them, to create context, to build interest, and to motivate the students** before starting the conversation in the audio.
- Students did not listen effectively because they focused on details, and they tried to understand every single word rather than the main ideas.
- When we are teaching listening, we don't start with details and with activities for asking for details.
- **Listening is a process, which means we should employ the sub-skills, step by step.**
- **Listening should be for a purpose. Why you are listening?**

IV. Types of listening texts

- ❖ **We should have variety.**
- ❖ Novice teachers most of time focus **on conversations, dialogues, or songs**, yet there are different types of listening texts.
- ❖ Variety is the key of a successful lesson.

1. Conversations

2. Stories

3. Lectures

4. Instructions

5. Songs

6. Announcements

V. Sub-skills and stages

- ❖ The strategies, the techniques, the skills, etc.
- ❖ The sub-skills that will **motivate you and help you to prepare, build interest, encourage your learners.**
 1. **Listening for specific information**
 2. **Infer the mood or attitude of the speaker.**
 3. **Pre-teach vocab**
 4. **Predicting**
 5. **Listening for gist (skimming)**

VI. Top down vs Bottom up

1. Top down

→ It is from General to specific.

2. Bottom up

→ It is moving up from specific to general.

VII. Instructions in Listening

1. Listening for gist

→ There is a story to listen to. Listen to it and decide on a title that is the best matching for it.

2. Understanding body language

→ Watch a video to see how the woman looks? How do you think she feels?

3. Listening for individual sounds

→ Listen to every pair of words and say if they are different or the same.

4. Listening for detail

→ Listen and draw the boy and girl according to the description given.

5. Listening for sentence stress

→ Listen closely and underline the word in the sentence said most strongly by the person who is speaking.

6. Listening for specific information

→ Listen and find what town Jim lives in.

VIII. Stages of Listening

1. Pre Listening Stage

- ❖ Its purposes are to create context, to prepare, to build interest, predicting, warm up, motivate.

2. While Listening Stage

We should start from easy-difficult-to complex –challenging.

If we ask about the text, it is while.

- ❖ Its purposes are to listening for gist and listening for general idea (**listens to the four people and checks your guess**).
- ❖ **Listen for specific (scanning) and details**
- ❖ **Listen and match the names with their feelings (infer,**

3. Post Listening Stage

- ❖ **Production stage**
- ❖ **Encourage students to produce the language**

Example: hobbies:

Pre:

- ↓ The teacher generates interest in topic, asking the class about their favorite hobbies.
- ↓ The teacher presents some key vocab in the listening text such as flying a kite, karate, boxing etc.

While:

- ↓ The teacher sets a gist listening task: who likes flying a kite, why does she like it? He plays the tape to check answers.
- ↓ The teacher sets a listening task for specific information. She plays the tape again and checks the answers.
- ↓ Students read the transcript of the recording and listen at the same time.

Post:

- ↓ The teacher sets a task for free practice asking students to write a dialogue about their favorite hobbies

Technique: Think-pair-share:

- Now, I want to you to think about this task I will give you three minutes.
- Now, I want to you to compare with your partner
- Then someone to share. Stand up share!
- ❖ **Why we use this technique? Because learning it is an ongoing process, step by step. They feel at ease; they feel confident.**

Listening steps

Warm up!3 min	
Pre-listening activities	We have two processes Top down vs bottom up. We use these in reading skill as well. → Introduce the topic (Prediction tasks, use students life knowledge of life) ↪ We can use visual aids, word map, mind map, brainstorming ✚ Look at the picture! What do you see, a women? What she is doing? Swimming great! Do you like swimming? ✚ And you what is this? Ohh playing soccer? Do you like it? Who is your favorite soccer player? ✚ What do you know about hobbies? Give me examples? ↪ Predicting ✚ Read the title! Look at the picture! Can you guess! The listening or text can be about what? Can you give me some examples ↪ Focus questions ✚ Look at the picture! What this person is doing? Is he playing? ↪ Key vocabulary ✚ You can write on the board four vocab ✚ Well, from these key vocabs, can you guess! The main idea of the listening will be about! ▪ All these are to active the students'schemata. ▪ Activating prior knowledge <u>3 stages:</u> A. Listening for shallow understanding. (listening for gist) (True or false questions) best title of the audio! What is the audio is about. B. Listening for deep understanding C. Listening for deeper understanding
While-listening activities	→ In while listening, we start with recognitions tasks (listen and check, listen and choose the right answer -true and false) → Then listen and justify. Listen and answer Wh-questions. ▪ Different listening activities: ↪ Wh-question/true or false statements/multiple choice answers ↪ Activities are based on listening sub-skills ▪ From general to specific
Post-listening activities	▪ Relating the topic to students' lives ↪ Write a short paragraph about your favorite hobby ↪ Write a conversation with your partner about a favorite hobby ↪ Giving opinions ✚ Do you agree that swimming is healthy? Do you agree is it dangerous? ↪ Comparing and contrasting

IX. Classroom implications

Classroom application

Receptionist: Mr. Jones, the doctor will see you now. Please go to consulting room number 3.

Doctor: Good morning Mr. Jones. What is wrong?

Andrew: Morning. I feel very ill. I am coughing and sneezing, I feel hot and cold all the time and eating makes me feel sick.

Doctor: Let me take your temperature. How long have you had the symptoms?

Andrew: They started about a day ago.

Doctor: Yes your temperature is very high. You have the flu. You'll have to go home and stay in bed until it gets better. Drink lots of water.

Andrew: Can you give me some medicine?

Doctor: I can give you something to reduce your fever but you just need to get bed rest. I will write you a prescription and you can collect the medicine from the pharmacy.

Andrew: Ok, thank you.

Design a sequence of tasks for this recorded text that you could use with a group of beginner learners.

Write at least two pre-listening tasks, two while-listening and one post-listening task.

1. Pre

- I will show Ss a pic of a doctor and a patient who suffers from fever. I will ask them: what do you see? What does this person suffer from?
- Pre-teach vocabs: cough, sneez, prescription.
- Use realia
- Have you ever visited a doctor?

2. While

- Recognition tasks: listen and match
- Multiple questions (listen and choose the right answer)
- Listen again and reorder sentences
- listen and tick
- wh-questions

3. Post

- Role play
- Write a short story
- Short dialogue to imitate
- Work pair and then share with your class.

X. How to Teach Listening

❖ The teaching of listening follows three steps: pre-while, and post listening.

1. Pre-listening:

- In this stage, the teacher is required to introduce the topic to students in a fun or tactical way. Let's say, you have an audio clip about the effects of smoking on health and would like to put your students in the context.
- The best way to do **(though there is no best way to do things)** is to bring a **photo, quote, or simply** by asking students about the effects of smoking on the users' health.
- This way, you put your students in the context and prepare them for the audio clip.
- After doing this, you may explain key words to students. You can use pictures, or you can bring those pictures or definitions of words and ask them to match the word with its definition of picture.

2. While-Listening :

- Now that you have given your students an idea about the topic of your audio-clip, you move to the listening part.
- The first listening is purposed to give students a general idea of the audio clip.
- After this first exposure to the audio material, you may ask your students about the general idea of the audio. Then, for the second listening, you ask students some questions in which they will have to look for specific information in the text.

3. Post-Listening :

- The teacher's creativity (personal touch) becomes more apparent in this stage.
- In this stage, a teacher may start a debate (are you for or against smoking?) , or a discussion in which students express their opinions and share their ideas with one another. You can also ask them to design a posture, draw a painting, write a song, devise a play, and write a paragraph. Any of the abovementioned activities can be useful.

XI. Recommendations

- When you want to set tasks, you should think how to motivate your learners, use your students' knowledge(activating SCHEMATA), you facilitate, you pre teach vocabs
- **Listening should be purposeful. Every listening should be accompanied with questions to answer.**
- **Teachers often tell learners that they don't have to understand everything, just the main points or the key words.**
- Use video where possible and appropriate.
- Give them practice in listening for different purposes: sometimes for understanding, sometimes for language input, sometimes for pronunciation study – i.e. purposes relevant both to their interests as learners of English and to their needs as prospective users of English.

How to teach writing

I. What is writing

- ❖ Writing and speaking are skills which deal with producing language more than **receive** it. Therefore, there are called **productive skills**.
- ❖ People write **to communicate a specific message**.
- ❖ People write **to communicate to someone**.

II. Types of writing

- All these types depend on the level of learners.

1. Formal/informal letters
2. Emails
3. Reports
4. Film/book review
5. Narrative description texts
6. Argumentative and expository texts.
7. Paragraphs
8. Application letters

III. The writing sub-skills

1. Forming letters

- Raise your hand into the air and use your finger to write the words apple.

2. Using the appropriate layout (organization-format-intro—body..)

- Put a tick in the right place in this letter for the address of the person who will receive it and cross the correct for the date.

3. Punctuating correctly

- This text does not have any commas, full stops or exclamation points. Read the letter and add them in the right places.

4. Linking

- Select the best conjunction from these: because, while, after. Connect the sentence pairs using the conjunction that you selected.

5. Planning

- Take a look at this list of suggestions for compositions. Put them in the proper order that you would write about them in your composition.

6. Proof-reading

- Once you have finished all your writing, go back and check it for language errors you may have made.

IV. Accuracy vs Communicating ideas

- ❖ We can focus on both.
- ❖ We can choose each one in lesson.

Accuracy	Communicating Ideas
• Spelling correctly • Forming letters correctly • Joining letters together correctly • Punctuation correctly • Using correct layouts • Choosing the right vocabulary • Using grammar correctly • Joining sentences correctly • Using paragraphs	• Using appropriate style and register • Organizing ideas in a helpful way • Joining words and sentences clearly • Using appropriate functions (meaning) such as narrating, requesting, complaining etc.

V. Writing strategies (stages)

1. Generating

→ Generating topics through prewriting activities.

✚ **Brainstorming, mapping, discussion, reading/listening notes, etc.**

2. Making the purpose

→ Making the purpose suits the audience

✚ **To inform, to communicate, etc.**

3. Writing a first draft

4. Revising

→ Revising the first draft content

5. Editing (or peer-editing)

→ Revised draft using resources

✚ **Dictionary, glossary, grammar reference**

6. Proofreading

→ Generating topics through prewriting activities.

✚ **Brainstorming, mapping, discussion, reading/listening notes, etc.**

7. Presenting

→ Giving the final work to your teacher

VI. Stages of a lesson

Prewriting or (planning)

⇒ Developing ideas and organizing them

+ What do you think about pollution? What are the causes and effects? What comes to your mind when you hear pollution?

While : (drafting)

⇒ Start writing

⇒ Find the language to express themselves (first draft)

Post : (editing, redrafting and proofreading)

⇒ Evaluating (looking at the strengths and weaknesses of their ideas, the organization of their writing and the accuracy of their language.

Put into practice:

Topic: Your favorite sport

Level: beginners

Pre writing:

Activities:

A. Brainstorming (any idea comes to your mind, just write it)

♠ Sts just going to talk their favorite sport.

+ T: What is your favorite sport?

+ Sts: My favorite sport is tennis / I play it every weekend/ It is very nice/ I play with friends / I feel tired / it is good for health.

Next:

B. Planning (they have to organize their ideas / what is number 1,2,3)

+ My favorite sport is tennis.....

Next

C. Linking words: first, second, third

+ I want you to use these linking words

D. Punctuation:

+ Don't forget the full stop, the colon

❖ We are just brainstorming and organizing ideas and giving them linking word and telling them about punctuation

Planning activities:

a. Brainstorming

- ✓ Getting started can be difficult, so students divided into groups quickly produce words and ideas about the writing.

b. Organizing

- ✓ Students make a plan of the writing before they start. These plans can be compared and discussed in groups before writing takes place.

c. Generating ideas

- ✓ Discovery tasks such as cubing (students write quickly about the subject in six different ways - they:
 - **1. describe it**
 - **2. compare it**
 - **3. associate it**
 - **4. analyze it**
 - **5. apply it**
 - **6. argue for or against it.**

d. Questioning

- ✓ In groups, the idea is to generate lots of questions about the topic. This helps students focus upon audience as they consider what the reader needs to know. The answers to these questions will form the basis to the composition.

e. Discussion and debate

- ✓ The teacher helps students with topics, helping them develop ideas in a positive and encouraging way.

While writing:

- ❖ Now, I want you work in pairs or groups. I want to you to write a paragraph. Don't forget to use the linking words and punctuations, etc. Now, they will start the first draft.

A. First draft:

-  **Just write and don't care about mistakes because there is another stage for correcting mistakes.**

Drafting activities!

a. Fast writing

- ✓ The students write quickly on a topic for five to ten minutes without worrying about correct language or punctuation. Writing as quickly as possible, if they cannot think of a word they leave a space or write it in their own language. The important thing is to keep writing. Later this text is revised.

b. Group compositions

- ✓ Working together in groups, sharing ideas. This collaborative writing is especially valuable as it involves other skills (speaking in particular.)

c. Changing viewpoints

- ✓ A good writing activity to follow a role-play or storytelling activity. Different students choose different points of view and think about /discuss what this character would write in a diary, witness statement, etc.

d. Varying form

- ✓ Similar to the activity above, but instead of different viewpoints, different text types are selected. How would the text be different if it were written as a letter, or a newspaper article, etc.

Post writing :

- ❖ Now, students have finished writing.
- ❖ In this stage, sts have to edit and proof read.

A. Editing and proof reading

✚ Now, I want you to compare your paragraphs. I want you to see if there are punctuation mistakes or writing. (peer correction)

- ❖ Now, once they finish editing and proof reading, they move to final draft.

B. Final draft

✚ They present the final draft and submit it.

Editing, redrafting and proof-reading

Activities:

a. Ordering

- ✓ Students take the notes written in one of the pre-writing activities above and organize them. What would come first? Why? Here it is good to tell them to start with information known to the reader before moving onto what the reader does not know.

b. Self-editing

- ✓ A good writer must learn how to evaluate their own language - to improve through checking their own text, looking for errors, structure. This way students will become better writers.

c. Peer editing and proof-reading

- ✓ Here, the texts are interchanged and the evaluation is done by other students. In the real world, it is common for writers to ask friends and colleagues to check texts for spelling, etc. You could also ask the students to reduce the texts, to edit them, concentrating on the most important information.

VII. Two types of writing (product or process approach)

Product writing	Process writing
→ The teacher gives you from the very beginning a sample. (reading serves writing)	→ Sts who are going to give you the writing, including paragraph.
→ Sts imitate model text	→ Text as a resource for comparison.
→ Organization of ideas more important than ideas themselves.	→ Ideas as starting point
→ One draft	→ More than one draft
→ Individual	→ Collaborative
→ Emphasis is on end product	→ Emphasis is on creative writing
It is for low achievers	→ It is for high achievers
▪ From the very beginning, you give them a sample. ▪ Read the paragraph and answer the two questions ▪ It seeks for final product, letter.	▪ Brainstorming, etc. ▪ It is as we have done in the stages above (pre-while-post) ▪ You teach them the skills, how to write.
✍ Teachers concentrate on the product. Their aim is to produce students who can write grammatically correct sentences linked with appropriate connectors. ✍ Teachers concentrate on the product. Their aim is to produce students who can write grammatically correct sentences linked with appropriate connectors. ✍ The sentence is considered the main unit. Students need to have mastery of the sentence before they proceed to the paragraph, and mastery at the paragraph before they proceed to the essay. Thus, teachers exercise control and set limits to the tasks of writing. Writing tasks become structured through three main stages: controlled, guided, and free writing.	✍ This approach tries to recreate in the classroom the processes or stages through which a writer passes to produce a text. The writer passes through recursive stages of rehearsing, drafting, and revising which interact repeatedly to discover meaning. <u>The writer first:</u> 1. Formulates ideas and takes information. 2. He then drafts what he wants to say. 3. Revises what he has written in an elaborated version. ✍ It pays much attention to the meaning and the communication of ideas. ✍ Considers meaningful communication primary and grammatical accuracy peripheral. ✍ Tolerates grammatical mistakes and errors as long as the message is clear.

How to Teach Speaking

I. Introduction

1. What is not speaking?

- Asking students to read.
- Asking students from the start to talk (**no vocabulary, no brainstorming, no predicting, no generating ideas**).
- Using the mother tongue.
- Correcting students all the time. (**it means you interrupt them**)
- When students are beginners, **I have to focus on structure, vocabulary, grammar, etc. In the beginning, it is better to focus on accuracy.**
- For intermediates and advanced, it is better to focus on both.

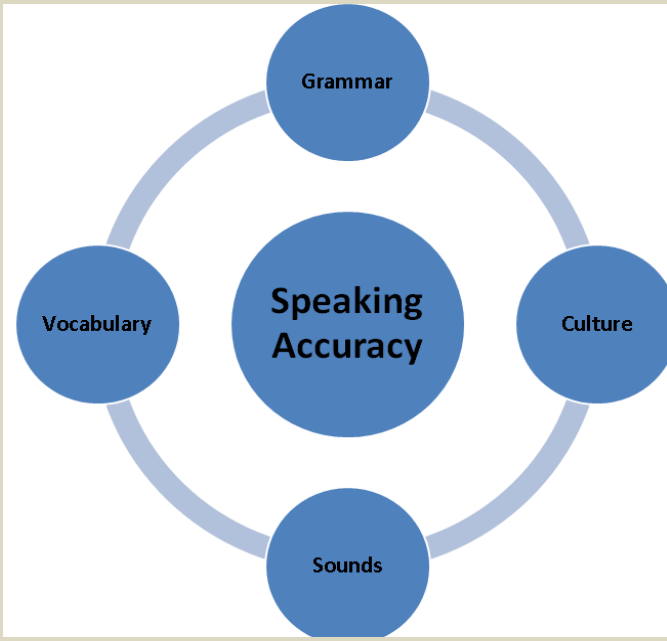

II. Why students feel hesitant to speak in class

- Fears of making mistakes
- Lack of confidence
- Peer intimidation
- Lack of interest in the topic
- Previous learning experiences
- Cultural reasons

III. How can teachers overcome these challenges and encourage learners' interaction?

- **TTT** must be low vs **STT** must be high
- **Think, pair, share**
- Mode of work: **pair-work** and **group-work**
- Several of restricted **practice** before fluency activities
- Create **fun learning atmosphere**
- Allow learners time to **think** about what they are going to say
- **Positive** feedback

IV. Speaking fluently vs Accuracy

Accuracy	Fluency
- Speaking accurately means being able to use the correct sounds, words, and grammar when speaking. - Spoken language needs to be accurate in order for communication to be successful. - Students who are beginning to learn English often focus on speaking accurately first. - When students become more proficient, they sometimes stop thinking too much about accuracy.  A circular diagram with a central blue circle labeled 'Speaking Accuracy'. Surrounding it are four smaller blue circles connected by a light blue ring. The subskills are: Grammar (top), Culture (right), Sounds (bottom), and Vocabulary (left).	- Speaking fluently in a new language requires the ability to speak with appropriate speed, acceptable flow, and proper tone of voice. - When students are first learning to speak, they often tend to focus on their language accuracy and this focus frequently slows down their speech causing them to be less fluent. - With students at the high intermediate and advanced levels, you should focus on fluency.  A circular diagram with a central blue circle labeled 'Speaking Fluency'. Surrounding it are four smaller blue circles connected by a light blue ring. The subskills are: Intonation (top), Stress (right), Reduced words (bottom), and Speaking rate (left).
Those are the subskills.	Those are the subskills
Guessing games/Question games (accuracy) In this kind of activity learners need to form questions to guess the answer. The focus can be on the question forms or, alternatively, on short answers. Question games can take the form of Yes/No questions i.e. - Teacher: <i>What animal am I?</i> - Learner: <i>Can you fly?</i> - Teacher: <i>No (I can't).</i> - Learner: <i>Do you eat meat?</i> - Teacher: <i>No (I don't).</i> - Learner: <i>Do you live on a farm?</i> - Teacher: <i>Yes (I do). etc.</i>	A discussion (fluency) Your local town/city council have just found \$10,000 and have decided to spend it on improving the town/city. They have come up with three ideas: 1. Building a new cinema. 2. Planting some trees in the park and putting in a small lake. 3. Holding a big street party. - Which of the ideas do you think is good, and why?

V. Characteristics of successful speaking activities

1. Students talk a lot

- In each activity, your objective is to push the students to speak.
- Speaking a lot both in class and outside. (students)
- Planning activities that require students to talk during class.

2. Participation

- An equal opportunity for students to speak.
- Monitoring carefully classroom discussions
- Ensuring they are **not being dominated by a minority of talkative participants**.

3. Motivation is high

How to motivate students to speak in class?

- It is by using technology, pictures, games, role plays, asking questions, and interesting activities.
- Selecting topics that your students are interested in or already know.
- **Playing games or having contests**

4. Language is at an acceptable level

- Speaking activities mustn't be too easy or too difficult (no motivation/discouragement)
- Classroom language activities should be used at the right level for your students.
- We should not tell them to speak at the beginning.

5. You have to model

- **Can we do number one all together?**

6. The mistakes

- It depends on the objectives.
- We can say that when we have a lesson about functions, we should focus only on these mistakes, but not all; we can also avoid pointing on mistakes that are related to tenses.

VI. Activities to develop speaking skills

1. Information-gap

- Fill in the gap

2. Story completion

3. Role-play

4. Conversations

5. Games

6. Interviews

7. Picture, yes/no question, and snake game.

VII. Model PPP

- ❖ Topic: hobbies.
- ❖ You want your students to talk about hobbies(asking questions and answers)

1. Presentation

A. Lead in questions:

→ We should talk about our personal experience, then lead in questions

✚ As a teacher, my favorite hobby is watching TV and playing soccer. I like to watch TV when I finish work. And, also I like to practice soccer with my friends in the forest.

- What about you?

B. Visual aids

C. Conversation to create context (the context can be a picture, a visual text,)

→ They read the conversation.

D. Predicting

→ Title, picture

E. Pre-teach vocabs

F. Gesture, body language, realia

G. Modeling

- ❖ All of these above are made to build interest, create context and motivate them.

2. Practice

- ❖ From easy to difficult.

A. Task 1: matching exercise

B. Task 2: gap filling

C. Complete the sentence or complete the dialogue

- ❖ The purpose here is to practice language

3. Production

- ❖ Now, they are well equipped by expressions, questions, vocabulary, then it is time for producing their own language.

A. Role play

B. Debate

C. Completing a story

- ❖ Sts will produce their own language

VIII. Practical Suggestions

1. Preparation and rehearsal

- Before a spoken task, give students some preparation and rehearsal time. Students will need guidance on how to use it. A sheet with simple guidelines is effective.

2. Transferring L1 strategies

- When preparing for a spoken task, make students aware of any relevant L1 strategies that might help them to perform the task successfully. For example, 'rephrasing' if someone does not understand what they mean.

3. Vague language

- Using **tape scripts** of informal speech focus on examples of vague language.

4. Transactional and interactional language

- Raise students' awareness by using a dialogue that contains both. It could be two friends chatting to each other (**interactional**) and ordering a meal (**transactional**).

5. Real interaction patterns

- Teach real interaction patterns. Introduce the following basic interactional pattern:
 - **Initiate,**
 - **Respond,**
 - **Follow-up.**
- This is a simplification of Amy Tsui's work. See Tsui (1994)
- The following interaction could be analysed as follows:

A: What did you do last night? (Initiate)

B: Went to the cinema (Respond)

A: Oh really? (Follow-up)

What did you see? (Initiate)

B: Lord of the Rings (Respond)

Have you been yet? (Initiate)

A: No it's difficult with the kids (Respond)

B: Yeah of course (follow-up)

How to teach vocabulary

I. Introduction

- Without vocabulary, we cannot convey meaning.
- It's not good to **elicit** each word individually.
- Sixteen might be a **large number** of words to teach in one session, especially for beginners.
- It is important to teach not only the meaning but also the **written** and **spoken** form + **the use**.
- No **Concept checking**.
- No **variety** of activities. (gap filling, multiple choice, task completion, role play, etc.)

II. Presenting vocabulary

❖ We should include these.

1. Form

A. SPELLING

B. STRESS

✚ If we are teaching a glass of water, the spelling you write it on the board, and we underline where exactly the stress is.

2. Meaning

A. Definition

B. Denotation and any strong connotations

✚ Does the word have a positive or a negative meaning?

3. Use

A. Part of speech (V, N, Adj, Adv, Prep, etc.)

B. Style(formal/informal)

Stages:	Techniques
Presentation	Spider diagram categorizing
Concept checking	
Practice	VA MATCHING CLASSIFICATION
Production	LIST Give them 4 words, and then write a paragraph for high achievers For low, I can demand them to write only sentences, using these words.

III. Stages

- ♠ With grammar and vocab, we use PPP model.
- ❖ We should stick to the book
- ❖ We can sometimes use Arabic only when we teach abstract vocabulary as they are difficult to be grasped.

Presentation	▪ You present vocabs A. Techniques: ♠ Brainstorming/mindmap -Fill in the spider diagram ♠ Flash cards ♠ Body language ♠ Realia ♠ Visual aids
Checking	▪ Concept checking A. Techniques: ♠ Visual aids ♠ Matching
Practicing	→ They should use the language → There are two types: i. Restricted practice+ report back ✚ Gap filling---matching--- Report means they will answer in pair, or in the class, or in the board. ii. Freer practice + report back ✚ Role play—dialogue—discussion--debate ▪ Sts can say everything they want A. Techniques: ♠ Eliciting

IV. Techniques/strategies

1. Picture
2. Realia
3. Opposite
4. Context
5. Translation
6. Definition
7. Body language

i. Presenting Vocabulary

❖ We are still in presentation

Exercise!	How is the meaning conveyed	Is the spoken form practiced	How is the written form made clear
Beginners	Visual aids	Drilling	It is neglected
Elementary	Categorizing, with words' relationships (giving examples)	Drilling, transcription	It is not dealt with
Intermediate	Comparison With words relationships(synonyms)	It sounds not important since the learner already pronounces it correctly	Spelling on the board

ii. Techniques to check understanding

❖ The second stage is to check understanding, and then we can move to practice. (concept checking)

→ Never use “Please, do you understand?”

→ Instead, we ask students concept questions;

Techniques	Advantages	Drawbacks
The teacher asks a learner to translate the word into their own language	- Time saving. to the point - students will get a clear understanding	Sts will always rely on their own language. It is a bad habit.
The teacher asks the sts to use the word in a sentence	- It helps the teacher to ensure the understanding of their students. - They will learn more.	Time-consuming
The teacher asks do you understand	It is not preferable	It is not an effective way to check understanding

V. Recommendation

- We should take into account the students' level.
- We should put words into context, text, conversations
- Students should **see** and **hear** the language again.
- Don't teach **too much** new language in one go.
- Don't try to teach **all the meanings** of a new piece of language.
- **Write** the new language on the board.
- The learner's understanding of a new language needs to be **checked**.
- Give lots of examples of the new language in **context**.
- Students should have the opportunity to use new language in **communicative situations**.

I. Introduction

- **Learning is a process:**
- It is hard for beginners to teach them the two past forms in one session.
- She used sentence level examples when she taught the lesson students found it hard to use the forms in texts.

Key skill:

1. There are **different** ways of teaching grammar.
 2. No one individual method suits all grammar points and all students.
 3. You should **vary** your approach to teaching grammar to cater for different learning styles.
- Your job as a teacher is to facilitate the process of learning.
 - Learning is a process. That is, we should teach a task by one time. Regular verbs not **(regular and irregulars verbs at one time.)**
 - **We should put structure into context (conversation, picture, so the sts can guess from the context.)**
 - **Too much practice and many exercises are important.**
 - **Don't to teach all the form and types of passive voice in one time.**

What does communicative language teaching mean?

- We teach lessons that are **students centered**. The st is in the center of learning process. The hearth of the learning process.
- We create **opportunities** for students to use English actively. We should provide students with enough practice.
- We create **context** for language use.
- We help students reach beyond their **comfort zone**.
- It is about real life communication.

II. Approaches

- ❖ There are two main approaches to teaching grammar. These are the **deductive** and the **inductive** approach.

Deductive approach	Inductive approach
↓ The rule ↓ The examples ▪ Moving from the rule to examples ▪ A deductive approach is when the rule is presented and the language is produced based on the rule. (The teacher gives the rule.) ▪	↓ Examples ↓ Rules ▪ Moving into the rule ▪ An inductive approach is when the rule is inferred through some form of guided discovery. (The teacher gives the students a means to discover the rule for themselves.)
Teacher is the spoon feeder	The students who are in charge in discovering the rules by themselves.
♠ Students are passive; they just listen ♠ The teacher is the source of knowledge.	♠ The teacher starts from examples, stories, pictures, conversations, etc. ♠ Put the items in context ♠ it puts students into context (picture, story) ♠ TTT is low ♠ It is more engaging
The deductive approach is undoubtedly time saving and allows more time for practicing the language items thus making it an effective approach with lower level students. The inductive approach, on the other hand, takes time and more beneficial to students who already have a base in the language as it encourages them to work things out for themselves based on their existing knowledge.	
What is the best approach?	
There is not the best way, yet it depends on type of lesson, on the size of classroom, on the teacher, on the morning or the afternoon class, on the complexity of the lesson, on the objectives of the lesson, etc.	

III. Stages

- ❖ To teach grammar, you can adopt the PPP model.

1. Presentation

Different ways to presentation:

- A. Demonstration
- B. Personalization (story)
- C. Situation
- D. Examples
- E. Explanation
- F. Text

2. Practice (restricted practice)

- ❖ Multiple choice tasks, gap-filling task, matching task, etc.

3. Production (Freer practice)

- ❖ Role plays, discussions, debate, etc.
- ↓ As a teacher, I should **present** the simple past.
- ↓ And I should help students **observe** the SP.
- ↓ I should know the students if **understand** the language (**concept checking**).
- ↓ After that, we move to practice.
- ↓ After the practice, we should encourage them to use the language.

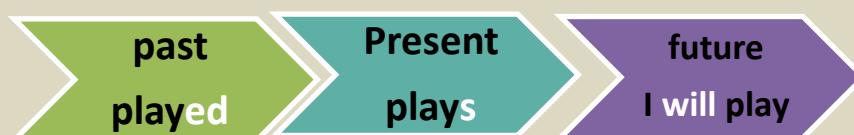

IV. Tips and Techniques

- ♠ While teaching grammar, it is better to use some tips, including:

1. Color coding or highlighting or circle

- ✚ I play**ed** tennis yesterday.
- ✚ She watch**ed** a movie last night.

2. Time lines (compare-contrast –time line—the best of the best)

3. K.I.S.S

- ♠ Keep it short and simple
- ♠ Use body language; key terms, give short instruction.

4. Error Correction

- ♠ Don't give the immediate correction.
- ♠ Self, peer and teacher correction
- ♠ We should involve the learner in the correction process.
- ♠ If you correct them, they will forget, but if they correct themselves, they will always remember it.

5. Fun activities

- ♠ Enjoyable and funny games
- ♠ Board games

V. Conclusion

- ❖ When teaching grammar, there are several questions we need to ask ourselves:
 1. How can I help my students know about the **use? What techniques? timelines**
 2. How can I help my learners notice the **form? Highlighting, color coding**
 3. What **problems** might my students face when learning the new language?
We use visual aids, variety of activities, technology, mode of work, different work of sheets, variety.
 4. How can I make the lesson fun, meaningful and memorable? Games, communicative activities, inviting students to go to the board, giving positive feedback, reward, good job, clap your hand, address them by their names.

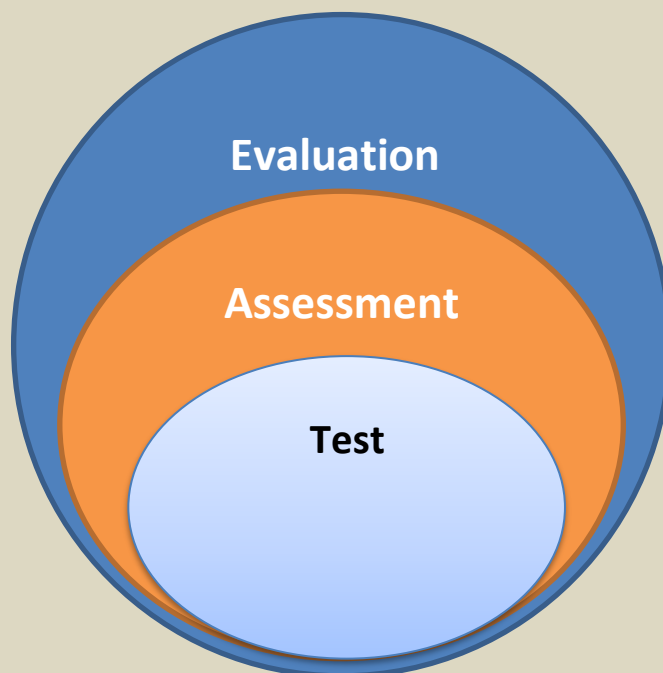

Assessment

I. Introduction

1. What is the difference between Assessment and Testing?

Assessment	Testing
- It is about performance - It is a long, ongoing process	Knowledge; Testing speaking, listening, vocab, etc.
Assessment is the purposeful, systematic, and ongoing collection of information as evidence for use in making judgment about students' performance.	- A test is used to examine someone's knowledge of something to determine what that person knows or has learned. - It measures the level of skill or knowledge that has been researched. - It is a formal and systematic way of gathering information about learners' behavior, usually through paper-and-pencil procedure
It is usually involves collection of data over a period of time. - Participation, attendance	A particular area - Tests never give you a real picture of students' performance. They give you 70% or 80%
It is individualized Positive feedback	→ In the beginning in the school year, in the middle, in the end.
Summative, formative, continuous.	→ Proficiency, achievement, diagnostic, prognostic

II. Test, assessment, evaluation

III. Formative Vs summative assessment

Two types of assessment :

Formative assessment	Summative assessment
To monitor (informal)	To evaluate (formal)
- Formative assessments are used not as a final evaluation, but as part of an ongoing process of assessment. - The goal is to monitor student learning and provide feedback that can be used by teachers and students to improve their learning. - It is characterized therefore as ‘Assessment for Learning’. - This can help teachers and students to identify their strengths and areas for improvement.	- Summative assessment is often described as ‘assessment of learning’ where the goal is to evaluate students’ learning at the end of a particular period of study, e.g. the end of a project, or school year. - This kind of assessment is used to determine what Students have learned and thus report on their progress.
- During the course - Ongoing process	- Moroccan National exam - It is when we complete the program, the course, etc. - Mid-term exam

We can consider test as a part of summative assessment and evaluation is the umbrella term.

1. What is the importance of Assessment for learning in language teaching?

- The goal of Assessment for Learning is improvement and it allows **both teachers and students** to identify areas for improvement and target their efforts accordingly.
- It helps students to improve their area of weakness.
- **A test** can give the teacher valuable information about where the students are in their learning and can affect what the teacher will cover next. They will help a teacher to decide if her teaching has been effective and help to highlight what needs to be reviewed. Testing can be as much an assessment of the teaching as the learning.
- **Tests** can also have a positive effect in that they encourage students to review material covered on the course.
- Tell the students that you will take into account their work on the course as well as the test result.

Assessment for learning (formative)	Assessment of learning (summative)
♣ In-class Q&A ♣ Self-assessment ♣ Peer assessment ♣ Quizzes (after one unit, lesson or 3 units). ♣ Detailed comments on a piece of written homework	♣ State or national exam (sum—test) ♣ End of chapter test ♣ A mid-term exam

IV. What are the reasons to test learners?

- A course director is expecting an intake of 200 students. They will all set a test on the **first day of the course. (Placement test)**
- A teacher has met his first new class. In the next session, he gives the class a short test. **(diagnostic test)**
- A teacher has completed the half of the course. She decides to give her class a test. **(progress or achievement test)**
- A class is about to complete the whole course and it is the end of the school year. The teacher decides to give her class a test.

V. Types of tests

1. Placement test

- It is when you have a lot of students. The purpose is to place them in the right group, beginners, intermediate, and advanced. **(English or French center)**
- A **test** usually given to a student entering an educational institution to determine specific knowledge or proficiency in various subjects for the purpose of assignment to appropriate courses or classes.
- Typically, colleges test students on areas like math, reading, writing, and foreign language. Your college placement tests scores give a college a good idea of your academic skill level.
- First and foremost: You cannot fail a placement test! While the idea of taking these tests can be daunting, they're just used to ensure you're enrolled in the right classes to succeed. It is important, however, to prepare and study for these tests so that you're placed into the right courses.

2. Diagnostic test

- A diagnostic test is a test that helps the teacher and learners identify problems that they have with the language. At the start of the course, the teacher gives the learners a diagnostic test to see what areas of language need to be in the syllabus.
- A **diagnostic test** helps teachers and learners identify problems that students have with the. English language.

3. Progress or achievement test

- **Achievement or progress tests** measure the students' improvement in relation to their syllabus. These tests only contain items which the students have been taught in class.
- Progress test occurs **at the end of the term** while achievement test occurs at the end of the school year (**national exam**).
- It is when you cover certain units or lessons.
- An achievement test checks the acquisition of the material
- An achievement test measures how an individual has learned over time and what the individual has learned by analyzing his present performance.

 **A math exam covering the latest chapter in your book**

4. Proficiency test

- It is not necessarily based on certain courses that students may have previously taken. Most students take this type of test to admit to a foreign university, get a job, or obtain some kind of certificate. Teachers design this test to measure students' knowledge and ability in a language.

Placement Test	Diagnostic Test	Progress and achievement Test	Proficiency Test
Designed to place learners in the right place: level	Designed to see the weaknesses and strength of learners	Designed to measure learner's language and skill progress in relation to the syllabus they have been following	Designed to give a global picture about a learner's knowledge and ability
Language centers	Beginning of the course	Progress tests at the end of the unit Achievement tests at the end of school year	To be admitted at a foreign university or get a job or certificate

5. Aptitude test

- An aptitude test given to high school students to determine which type of careers they might be good at
- It is designed to assess what a person is capable of doing or to predict what a person is able.
- A natural ability to do something.

VI. Alternatives to testing

↓ Continuous assessment

- Teachers give grades for a number of assignments over a period of time. A final grade is decided on a combination of assignments.

↓ Portfolio

- A student collects a number of assignments and projects and presents them in a file. The file is then used as a basis for evaluation.

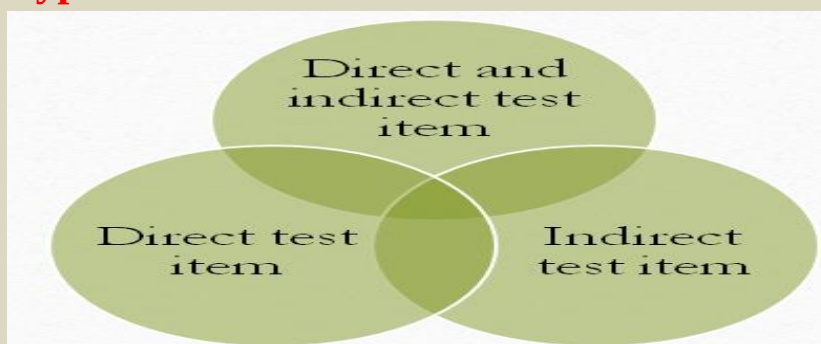

↓ Self-assessment

- The students evaluate themselves. The criteria must be carefully decided upon beforehand.

↓ Teacher's assessment

- The teacher gives an assessment of the learner for work done throughout the course including classroom contributions.

VII. Types of test items

Indirect or objective test item

- Items of a language test are commonly used to measure knowledge and understanding of different language aspects (e.g. **vocabulary and grammar**).

These items usually include:

- True-Or-False Items • Multiple-Choice Questions (MCQ)
- Completion Items • Matching Items
- Re-arrangement Items • Word-Recognition Items
- Transformation Items • Punctuation Items

Direct test item

- Test items require students to use the language; students are asked to **DO** something (i.e. a task) instead of just demonstrating knowledge about language..

In WRITING, instead of just put missing words in a sentence, we might ask them to write a LEAFLET or brochure based on information supplied in an accompanying text.

In SPEAKING, we might involve students in oral interviews or free discussions or ask them to **DRAMATIZE** (e.g. role-play) certain situations.

VIII. Characteristics of good tests (Principles of testing)

Validity	Reliability
○ A test is valid if it tests what is supposed to test. ○ VALIDITY is the extent to which the instruments that are used in the experiment measure exactly what you want them to measure.	○ A reliable test should give consistent result. If the same group of learners took the same test again in a couple of days, they should get the same results. ○ Reliability is the extent to which the outcomes are consistent when the experiment is repeated more than once; it deals with the results.
○ If you have taught students simple past, you should test them in the latter. ○ It is not valid to test speaking and ask your students talk about a topic that required specialist knowledge of phonology.	○ A test is said to be reliable if we get almost the same results repeatedly.

Practicality	Authenticity
Practicality is defined in terms of: Cost ▪ It is not excessively expensive. Time ▪ It is impractical when it needs six hours in doing it. Administration ▪ It is relatively easy to administer (when there is 3 persons for 100 hundred students—it is impractical) Scoring/evaluation ▪ The examiner must give clearly procedure of scoring and have enough time to evaluate and time to announce the result.	→ Authenticity deals with the real world → Teachers should construct a test with the test items are likely to be used or applied in the real contexts of daily life. Considerations that might be helpful to present authenticity in a test: → The language in the test is natural as possible. → Items are contextualized rather isolated. → Topics are meaningful(relevant, interesting) to the learners.
Washback/backwash	
→ An effect that is not the direct result of something → It refers to the influence of testing on teaching and learning → The way to enhance washback by comment generously and specifically on test performance, such as, give complement for the strengths and constructive criticism for weaknesses. → It is more formative in nature than summative.	

Good test should be

- 1. Valid:** designed to do the job they are supposed to do, or measure the specific aspects/components they are to measure.
- 2. Reliable:** gives the same or similar results if marked by many scorers or if administered on different occasion
- 3. Consistent** with the activities used in the classroom. (You should use the same test items that were used in the class (eg. gap filling, match, etc.)
- 4. Motivating and encouraging;** never design a FAILING test.

The ethics of the teaching profession

I. Definition

- a system of moral principles or rules of behaviour
- Ethics is a branch of philosophy concerned with the study of what is good and bad. Ethical behavior is the way a living creature acts.
- In philosophy, ethics studies the moral behavior in humans, and how one should act.
- Professional ethics is a set of standards adopted by a professional community.

II. The importance of ethics in education

- **What teachers should do and should not do.**
- Ethics in education helps run the system smoothly. It sets standards that are applicable and protects the interest of both the learner and tutor. Teachers are responsible to help develop the personality of students and act as a mentor to them to influence their personal development and behaviour. Whereas students should realise the importance of responsibility and move forward with applying ethical practices over time.
- Ethics is the guiding framework on how one should conduct themselves in their personal and professional lives. Without ethics put in place, there be would unbalance relationships among family and staff members

2. Teacher ethics are statements that describe or delineate what is acceptable conduct for educators

Examples:

- A teacher shall not use professional relationships with students, parents, and colleagues to private advantage.
- The fairness approach assumes that people should be treated equally regardless of their station in life, ect.

Seven effective ways to promote equity in the classroom:

- Reflect on your own beliefs.
- Reduce race and gender barriers to learning.
- Don't ask students of color to be "experts" on their race.
- Diversify your curriculum.

Classroom management

Roles teacher play

1. Planner

→ Teacher prepares and thinks through the lesson in detail before teaching it so that it has variety and there are appropriate activities for the different learners in the class.

2. Informer

→ Teacher gives the students detailed information about the language or about an activity.

3. Manager

→ Teacher organizes the learning space, makes sure everything in the classroom is running smoothly and sets up rules and routines (**i.e. things which are done regularly**) for behaviour.

4. Monitor

→ Teacher goes around the class during individual, pair and group work activities, checking learning.

5. Involver

→ Teacher makes sure all the students are taking part in the activities.

6. Parent/friend

→ Comforts students when they are upset or unhappy.

7. Diagnostician

→ Teacher is able to recognize the cause of students' difficulties.

8. Resource

→ Can be used by the students for help and advice.

I. What do teacher's do (roles) before the lesson, during the lesson, and after the lesson?

1. Before the lesson

- The teacher is the **planner of materials** to ensure that the lesson is appropriate for the students and the learning purpose.
- The teacher is also a **diagnostician** of her/his students' problems.

2. During the lesson

- When new language or new vocabulary is being presented to the students, the teacher takes on the role of **an informer**.
- When setting up activities, the teacher takes on the role of **manager**.
- While students are doing activities, the teacher becomes the **monitor**, **diagnostician**, **manager** and a **resource**.
- Where there are disciplinary issues, the teacher becomes the **manager** and in some cases a **parent or a friend**.

3. After the lesson

- When taking into consideration how successful the lesson was, what the students understood and were able to do and what they had issues with, the teacher is the **diagnostician** and **planner**. Teachers look at their scheme of work to check whether or not the next lesson is properly and suitably planned

II. Teacher roles

1. Assessor

- Evaluating learners' performance, behavior, effort and contribution.
- Checking understanding
- Testing learner progress and level
- Providing feedback on work, progress, behavior and contribution

2. Contributor

- Putting forward ideas or information other than language, e.g. participating in discussions.

3. Counselor

- Giving learners advice on difficulties they may have outside of their language classroom

4. Diagnostician

- Evaluating learners' needs and difficulties.

5. Facilitator

- Enabling learners to fulfill their potential
- Helping learners to access resources
- Providing opportunities for individual learning

6. Language resource

- Personalizing, contextualizing, eliciting, clarifying, explaining, modeling language.
- Consolidating learner language.
- Providing language input.

7. Manager

- Controlling the group dynamic
- Deciding on interaction patterns (mode of work)
- Demonstrating tasks and activities
- Encouraging learners
- Giving instructions
- Motivating learners
- Maintaining discipline
- Responding to classroom problems as they happen.

8. Monitor

- Observing and collecting information about learner performance, behavior, contribution and effort and progress
- Keeping a written record of learners' work.

9. Narrator

- Telling stories and telling learners about things that have happened.

10. Planner

- Anticipating problems
- Deciding on a methodology for lessons
- Designing and adapting texts and materials
- Preparing texts and tasks for learners
- Selecting materials and texts for lessons.

11. reflector

- Thinking about his/her performance
- Thinking about learners' progress

Students roles

- Obey the teachers
- Maintain discipline in the class
- Keep the school neat and tidy
- Be helpful by clearing their materials after a class
- Abide by the rules of the school
- Participate in the activities organized in the school
- Co-operate with the teachers
- Active participants

Group dynamics

- ❖ **Group dynamics refer to the relationships between learners in a group and the impact that this has on the way they work.**
- ❖ **Group dynamics concern how groups form, their structure and process, and how they function.**
- ❖ **It concerns with how and why groups develop.**
- ❖ **The theory means that when individuals share common activities, they will have more interaction and will develop attitudes(positive or negative) toward each other. The major element in this theory is the interaction of the individuals involved.**
- ❖ **It refers to the relationships between learners in a group and the impact that this has on the way they work.**
- ❖ **Dynamics mean change and GD means the change of behavior through interaction in the group.**
- ❖ **This kind of changing in behavior of students due to their interaction in group with group members is called GD.**
- ❖ **Every group influences, to a great extent, the behavior of its member.**
- ❖ **The psychology of group dynamics theory states that certain types of people will become leaders, and others will become workers, etc.**
- ❖ **Students behave differently in a group than they do individually.**
- ❖ **Students will assume certain roles within the group.**

Reasons to study group dynamics:

- To improve the emotional and social climate of the class.
- To improve group relation in the class
- To have a thorough knowledge of the interaction process

The stages of group development, which are affected by group dynamics, are as follows:

1. Forming:

- A group is created

2. Storming:

- Group members seek out others in the group who share similar interests.

3. Norming :

- Group norms are created

4. Performing :

- Group tasks are begun, carried out, and completed.

5. Adjourning:

Managing misbehavior

1. Stay Calm and Emotion Free

- ❖ Teacher should never yell at a student or tell a student to “shut up. Teachers must stay calm when addressing a disruptive student. In many cases, a student is trying to get the teacher to react foolishly. If you stay calm and keep your wits, it can diffuse the situation rather quickly.

2. Be Firm and Direct

- ❖ The worst thing a teacher can do is to ignore a situation that they hope will go away. Do not allow your students to get away with the little things. Immediately confront them about their behavior. Have them tell you what they are doing wrong, why it is a problem, and what the proper behavior is. Educate them on how their behavior impacts others. Students may resist structure early on, but they ultimately embrace it because they feel safe in a structured learning environment.

3. Listen Carefully to Students

- ❖ Do not jump to conclusions. If a student has something to say, then listen to their side. Sometimes, there are things that led to the disruption that you may not have seen. Sometimes there are things going on outside of the classroom that led to the behavior. Sometimes their behavior may be a cry for help and listening to them may allow you to get them some help. Repeat their concerns to them so that they know you have been listening. It may not make a difference in how you handle the situation, but listening may build some trust or provide you with insights into other issues that are more important.

4. Remove the Audience

- ❖ Never intentionally embarrass a student or call them out in front of their classmates. It will do more harm than it will good. Addressing a student individually in the hallway or after class will ultimately be more productive than addressing them in front of their peers. They will be more receptive to what you have to say. They are probably likely to be more open and honest with you. It is important to maintain the dignity of all of your students. No one wants to be called out in front of his or her peers. Doing so ultimately damages your credibility and undermines your authority as a teacher.

5. By careful planning of the lesson:

- When a lesson is clearly planned and organized students' attention will be kept on the task and the formation of a vacuum will not be allowed which may be filled by distracting activities.

6. Fairness:

- Teacher should always try to avoid having favourites or picking particular individuals. The major part of their job is not to show these preferences or prejudices in the classroom.

7. Interpersonal relationships:

- If students respect you and each other, they are more likely to cooperate.
